

This Service Manual covers model 034 chain saws since the start of production and can therefore be used as a reference for professional repairs and overhauls on all versions of the 034.

In the event of faults it is quite possible that a particular condition may have several causes. It is, therefore, advisable to consult the "troubleshooting charts" of all chapters when tracing faults. We also recommend that you make use of the exploded views in the illustrated parts lists while carrying out repair work.

This service manual and all technical information bulletins are intended exclusively for the use of STIHL servicing staff and dealers and must not be passed on to third parties.

Repair work is made considerably easier if the chain saw is mounted on assembly stand 5910 850 3100. The saw is easily attached to the stand by means of the two bar mounting studs and nuts.

While on the assembly stand, the chain saw can be swiveled into any required position to suit the job being done. This not only has the advantage of keeping the component in the best position for the repair, but also leaves both hands free for the work, and thus represents a considerable time-saving.

Our special tool manual illustrates and lists the part numbers of all available machine-related servicing tools as well as general purpose tools for all machines.

The special tool manual is available in various languages and can be ordered by quoting the appropriate part number listed hereunder.

Tree Farmer ,2000 **Brush-clearing Head Evaluation** Andy Trent,2003 Describes the evaluation of a new steel bladed head for brush clearing saws that can be used to cut small diameter trees less than 2 inches in diameter efficiently The brush clearing head has an aluminum alloy housing with three replaceable steel blades that do not have to be sharpened The head eliminates many of the problems encountered when using circular saw blades to cut brush The new tool may make it possible to thin stands of lodgepole pine or ponderosa pine while the trees are still young and small Trees in these stands have usually been allowed to grow large enough so that they could be safely cut with chain saws The crowded stands were growing slowly during this period If the stands were thinned earlier the remaining trees would grow more quickly and wildlife species that prefer open stands would benefit However when trees are small they must be cut off near the ground during thinning to keep their lowest limbs from regrowing Making cuts close to the ground with chain saws can be dangerous and is tiring In addition chain saw blades must be resharpended when they strike rocks or dirt So must the blades of circular saws The steel blades of the head do not require sharpening but they must be replaced when the blades have become too badly worn In rocky areas blades might have to be replaced daily The head throws debris that can cause injuries Operators must wear protective equipment Even though operators wore protective equipment during the evaluations they suffered minor injuries in the chest and groin **Power Farming in Australia and New Zealand Technical Manual** ,1968 **Forest Industries** ,1983 *Farmers and Consumers Market Bulletin* ,2010 **Timber Processing** ,1992
