- ☑ The needle on the carburetor gauge should move as pressure and vacuum are applied to the crankcase.

If the impulse line becomes blocked, the running behavior of the engine will indicate carburetor problems, when in fact there may be none.

Carburetors

Inspect carburetor visually.

- ☑ Before testing or disassembly, visually inspect the carburetor for damage. If something on the carburetor is physically broken or worn, most likely the carburetor will need replacing and no further time will be spent on evaluation.
- ☑ If the carburetor has no physical damage and the throttle shaft is tight, then perform a three step evaluation with a carburetor pressure tester, such as a ZAMA ZPG-1. This will allow any internal faults in the carburetor to be identified quickly.
