Panoramic View of Cognitive Impairment: Interdisciplinary Cognitive Research Fangyi Xu, 2024-08-01 Cognition, information processing activities for individuals to understand the objective world, reflects the real world in the human brain. Cognitive impairment refers to a decline in cognitive functioning of varying degrees, from subjective cognitive impairment to severe dementia. With the accelerated global population aging, the number of people with cognitive impairment is increasing rapidly. Dementia has become a major contributor to the global burden of disease and loss of disability-adjusted life years. Cognitive impairment is a heterogeneous syndrome, the cause of which is still myriad. Although significant advancement in the understanding of the

pathology of cognitive impairment has been made in recent decades the tools and strategies at our disposal to deal with cognitive impairment are still very limited Currently no disease modified treatment has been identified Interdisciplinary research refers to the methodology of comprehensive understanding or problem solving through the intersection between natural science and social science and other disciplines or the internal intersection between many disciplines within a certain category of science It is conducive to the overall understanding of problems and identifying effective solutions to complex problems faced by human society In recent years studies in many fields other than neurology have inspired our understanding of cognitive impairment putting forward new insights into its phenomenology and providing many effective prevention or alleviation strategies to delay cognitive decline or manage the symptoms It is very likely that interdisciplinary research would shed a light on our efforts to cope with the challenges brought by the growing epidemic of cognitive impairment

The Nature of Physical Computation Oron Shagrir, 2022 Computing systems are ubiquitous in contemporary life Even the brain is thought to be a computing system of sorts But what does it mean to say that a given organ or system computes What is it about laptops smartphones and nervous systems that they are deemed to compute and why does it seldom occur to us to describe stomachs hurricanes rocks or chairs that way These questions are key to laying the conceptual foundations of computational sciences including computer science and engineering and the cognitive and neural sciences Oron Shagrir here provides an extended argument for the semantic view of computation which states that semantic properties are involved in the nature of computing systems The first part of the book provides general background Although different in scope these chapters have a common theme namely that the linkage between the mathematical theory of computability and the notion of physical computation is weak The second part of the book reviews existing non semantic accounts of physical computation Shagrir analyze three influential accounts in greater depth and argues that none of these accounts is satisfactory but each of them highlights certain key features of physical computation that he eventually adopts in his own semantic account of physical computation a view that rests on a phenomenon known as simultaneous implementation or indeterminacy of computation Shagrir completes the characterization of his account of computation and highlights the distinctive feature of computational explanations

This book describes the building of walls symbolic and physical between Americans and Mexicans as well as the consequences that these walls have in the lives of immigrants and Latin communities in the United States. The book is divided into three parts: categorical thinking, anti immigrant speech and immigration as an experience. The sections discuss how the idea of the nation state itself constructs borders, how political strategy and racist ideologies reinforce the idea of irreconcilable differences between whites and Latinos and how immigrants and their families overcome their struggles to continue living in America. They analyze historical precedents, normative frameworks, divisive discourses and contemporary daily interactions between whites and Latin individuals. It discusses the debates on how to name people of Latin American origin and the framing of immigrants as a threat and contrasts them to the experiences of migrants and border residents. *Building Walls* makes a theoretical contribution by showing how different dimensions work together to create durable inequalities between US native whites, Latinos and newcomers. It provides a sophisticated analysis and empirical description of racializing and exclusionary processes.
