compensate for higher input requirements and cost of capital On average households harvest 29 30 bags 100 kg each or 2 9 3 0 metric tons of maize per hectare and the required repayment for fertilizer seed herbicide and materials provided under the average CF scheme is 21 25 bags 50 kg each per acre or 2 6 3 0 tons per hectare which leaves almost none for home consumption or for sale Despite higher yields the costs to produce 1 ton of maize under CF schemes remain high on average higher than on maize farms without CF schemes more than twice that of several countries in Africa and more than seven times higher than that of major maize exporting countries the United States Brazil and Argentina Sustainability of these CF schemes will depend on from the firms perspective minimizing the costs to run and monitor them and from the farmers perspective developing and promoting much improved varieties and technologies that may lead to a jump in yields and gross margins to compensate for the high cost of credit Journal of Economic Literature ,1999 *Australian national bibliography* ,1961 Statistics for the 21st Century Gabor Szekely,2000-01-25 A selection of articles presented at the Eighth Lukacs Symposium held at the Bowling Green State University Ohio They discuss consistency and accuracy of the sequential bootstrap hypothesis testing geometry in multivariate analysis the classical extreme value model the analysis of cross classified data diffusion models for neural activity e The Software Encyclopedia 2001 ,2001 Monthly Report on General Business and Agricultural Conditions in Federal Reserve District No. 8 ,1991 **PC Mag** ,1992-04-28 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology Central Bank Policy Perry Warjiyo,Solikin M.
