Polymer Based Bio-nanocomposites Chandrasekar Muthukumar, Senthil Muthu Kumar Thiagamani, Senthilkumar Krishnasamy, Rajini Nagarajan, Suchart Siengchin, 2022-03-28 This book gives a comprehensive overview of bionanocomposites a class of materials that consist of a biopolymer matrix which is embedded with nanoparticles and natural fibres as reinforcement to produce novel material and achieve superior physico chemical and mechanical properties The book looks into the synthesis of various forms of nanoparticles the fabrication methods and the characterization of bionanocomposites It also includes topics related to the sustainability and life prediction of bionanocomposites such as biodegradability recycling and re use An important aspect in the designing of bionanocomposites includes computational modeling and the suitability of the bionanocomposites in various applications is presented This book appeals to students researchers and scientists looking to gain fundamental knowledge know about recent advancements in the research on bionanocomposites and their applications

Advanced Materials for a Sustainable Environment Naveen Kumar, Peter Ramashadi Makgwane, 2022-12-30 This book summarizes recent and critical aspects of advanced materials for environmental protection and remediation It explores the various development aspects related to environmental remediation including design and development of novel and highly efficient materials aimed at environmental sustainability Synthesis of advanced materials with desirable physicochemical properties and applications is covered as well Distributed across 13 chapters the major topics covered include sensing and elimination of contaminants and hazardous materials via advanced materials along with hydrogen energy biofuels and CO₂ capture technology Discusses the development in design of synthesis process and materials with sustainable approach Covers removal of biotic and abiotic wastes from the aqueous systems Includes hydrogen energy and biofuels under green energy production Explores removal of environmental soil and air contaminants with nanomaterials Reviews advanced materials for environmental remediation in both liquid and gas phases

Circular Economy Maulin P. Shah, Suvendu Manna, Papita Das, 2024-08-23 The reclamation of wastewater and other essential materials is among the major research areas for understanding the effects of implementing a circular economic model The re use and re cycling of wastewater can greatly reduce the overall demand for freshwater for various industrial applications Such concepts could potentially greatly reduce the overall water demands of our planet if implemented successfully Circular Economy Applications for Water Remediation will examine the current understanding of the circular economy in water remediation processes its drawbacks and relatively unexplored areas that require further research This book Provides an overview of the processes available to extract value added materials from wastewater such as clean water nutrients and energy Explores the possibilities of re using wastewater for agricultural uses Provides an overview of the current policies and regulations concerning the implementation of circular economy concepts in wastewater remediation

Strategic Information Technology Governance and Organizational Politics in Modern Business Iyamu, Tiko, 2015-07-17

Individually the fields of organizational politics and strategic information technology have soared in popularity. Studies suggest that the interaction between the two would prove beneficial to both the academic and corporate domains. This integration would serve to enable support and manage modern businesses. Strategic Information Technology Governance and Organizational Politics in Modern Business gives voice to fresh perspectives on the development, implementation, and practice of information systems and technology in organizations. This book is beneficial for business people, undergraduate students, postgraduate candidates, and researchers looking to gain a more in-depth understanding of the influence of socio-technical factors on ICT operations.

Farming for Food and Water Security Eric Lichtfouse, 2012-06-30 Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for our children. This discipline addresses current issues such as climate change, increasing food and fuel prices, starvation, obesity, water pollution, soil erosion, fertility loss, pest control, and biodiversity depletion. Novel solutions are proposed based on integrated knowledge from agronomy, soil science, molecular biology, chemistry, toxicology, ecology, economy, philosophy, and social sciences. As actual society issues are now intertwined, sustainable agriculture will bring solutions to build a safer world. This book series analyzes current agricultural issues and proposes alternative solutions, consequently helping all scientists, decision makers, professors, farmers, and politicians wishing to build safe agriculture energy and food systems for future generations.

Nanostructured Metal-Oxide Electrode Materials for Water Purification Onoyivwe Monday Ama, Suprakas Sinha Ray, 2020-04-07 This book reports on the development of nanostructured metal oxide based electrode materials for use in water purification. The removal of organic pollutants and heavy metals from wastewater is a growing environmental and societal priority. This book thus focuses primarily on new techniques to modify the nanostructural properties of various solvent electrolyte combinations to address these issues. Water treatment is becoming more and more challenging due to the ever increasing complexity of the pollutants present, requiring alternative and complementary approaches toward the removal of toxic chemicals, heavy metals, and microorganisms, to name a few. This contributed volume cuts across the fields of electrochemistry, water science, materials science, and nanotechnology while presenting up-to-date experimental results on the properties and synthesis of metal oxide electrode materials as well as their application to areas such as biosensing and photochemical removal of organic wastewater pollutants. Featuring an introductory chapter on electrochemical cells, this book is well positioned to acquaint interdisciplinary researchers to the field while providing topical coverage of the latest techniques and methodology. It is ideal for students and research professionals in water science, materials science, and chemical and civil engineering.
