Past and Future Vision of Veterinary Research Kenneth Lam, 2014-09-18 The Hong Kong Jockey Club HKJC Veterinary Departments have enabled an environment suitable to set an international benchmark on a project concept to enhance the welfare of racehorses based on research using extensive and detailed data collection within an integrated framework Retrospective analysis of data collected over the past several years has been made available. The approach outlined in this book has two broad objectives The first is to investigate outcomes of interest using data which has already been collected Outcomes of interest are likely to include though not be limited to variables that influence injury retirement or performance The second broad objective is to extend the approach to a more general assessment of the usefulness of different data types and different variables and the assessment of data collection collation analysis and reporting methodology as well as the development of intervention strategy This book concludes with a philosophical view point on the veterinary management of thoroughbred racing injuries in which a think out of the box concept in assessing the risk of racehorse injuries is discussed One outcome of this is an integrated technology approach for tracking horse performance recently developed by Cambridge Design UK The integrated technology flight deck recorder concept for monitoring trackwork and race performance of racehorses can allow a standardised review of detailed training data and biometric readings from direct measurements of individual horse to assess the progress of performance and the effect of track conditions. The development of integrated performance tracking technology is mission critical for the worldwide racing industry to optimize horse welfare safety and Epidemiology for Field Veterinarians Evan racing performance as well as to enhance the integrity of racing Sergeant, Nigel Perkins, 2015-07-28 Intended as an introduction for veterinarians and other animal health professionals interested in and wishing to apply epidemiological methods in their day to day work this book provides a practical guide for those new to the field Its applied focus covers the principles of epidemiology in real world situations and practical implementation of disease outbreak investigation for both emerging and endemic diseases Techniques and methods are discussed supported by case studies and practical examples to illustrate their application. The book is clearly written and accessible providing readers with practical information and encouraging the development of problem solving skills It is an essential handbook for veterinary surgeons and students and those involved in animal health food safety and epidemiology
