[marche en soi](#) Jean-Philippe Greiner, 2018 **Theoretical Physics, Wavelets, Analysis, Genomics** Patrick Flandrin, Stéphane Jaffard, Thierry Paul, Bruno Torresani, 2023-05-31 Over the course of a scientific career spanning more than fifty years Alex Grossmann 1930 2019 made many important contributions to a wide range of areas including among others mathematics numerical analysis physics genetics and biology His lasting influence can be seen not only in his research and numerous publications but also through the relationships he cultivated with his collaborators and students This edited

volume features chapters written by some of these colleagues as well as researchers whom Grossmann's work and way of thinking has impacted in a decisive way. Reflecting the diversity of his interests and their interdisciplinary nature, these chapters explore a variety of current topics in quantum mechanics, elementary particles and theoretical physics, wavelets and mathematical analysis and genomics and biology. A scientific biography of Grossmann along with a more personal biography written by his son serve as an introduction. Also included are the introduction to his PhD thesis and an unpublished paper coauthored by him. Researchers working in any of the fields listed above will find this volume to be an insightful and informative work. *La vie oscillatoire* A. Goldbeter, 2010 **Dynamics of Physiological Control** Yoichiro Mori, Benoît Perthame, Angela Stevens, 2025-04-03

This book provides an overview of recent mathematical models for dynamics in cellular systems and offers a unique vision of the field by prominent experts. It covers among others the regulatory basis of oscillations in biological systems, ergodic and chaotic properties in biological models with the example of maturity distribution of precursors of blood cells, time delayed feedbacks, mathematical models of cell division and heterogeneous stem cell regeneration, quantitative mathematical modeling of glucose regulation, data driven models of chemotherapy induced neutropenia and effects of irradiation and antioxidants in Alzheimer's disease. This book is directed towards mathematicians interested in learning about modeling in cellular systems and is accessible also to theoreticians in biology and medicine.

Engineering Of Chemical Complexity II Alexander S Mikhailov, Gerhard Ertl, 2014-10-14 This second review volume is a follow up to the book *Engineering of Chemical Complexity* that appeared in 2013. Co-edited by the Nobel laureate Gerhard Ertl, this book provides a broad perspective over the current research aimed at understanding the design and control of complex chemical systems of various origins on the scales ranging from single molecules and nano phenomena to macroscopic chemical reactors. Self organization behavior and emergence of coherent collective dynamics in reaction diffusion systems in active soft matter and biochemical networks are discussed. Special attention is paid to applications in cell biology to molecular motors and microfluidics effects. The reviews prepared by leading international experts from the EU, USA, Russia and Japan together yield a fascinating picture of a rapidly developing research discipline that brings chemical engineering to new frontiers. Systems Biology of Cell Signaling James Ferrell, 2021-09-28 How can we understand the complexity of genes, RNAs and proteins and the associated regulatory networks? One approach is to look for recurring types of dynamical behavior. Mathematical models prove to be useful, especially models coming from theories of biochemical reactions such as ordinary differential equation models. Clever, careful experiments test these models and their basis in specific theories. This textbook aims to provide advanced students with the tools and insights needed to carry out studies of signal transduction, drawing on modeling theory and experimentation. Early chapters summarize the basic building blocks of signaling systems: binding, dissociation, synthesis, destruction and activation/inactivation. Subsequent chapters introduce various basic circuit devices: amplifiers, stabilizers, pulse generators, switches, stochastic spike generators and oscillators. All

chapters consistently use approaches and concepts from chemical kinetics and nonlinear dynamics including rate balance analysis phase plane analysis nullclines linear stability analysis stable nodes saddles unstable nodes stable and unstable spirals and bifurcations This textbook seeks to provide quantitatively inclined biologists and biologically inclined physicists with the tools and insights needed to apply modeling and theory to interesting biological processes Key Features Full color illustration program with diagrams to help illuminate the concepts Enables the reader to apply modeling and theory to the biological processes Further Reading for each chapter High quality figures available for instructors to download

Le Temps d'exister Michel Delage, 2020-09-23 Chacun de nous vit sa propre expérience du temps liée à ce qu'il est son histoire familiale la société dans laquelle il vit chacun de nous s'oriente dans l'existence grâce à ces repères temporels. Mais il arrive que ces repères temporels se brouillent. C'est ce qui se produit lorsque la famille n'est pas stable qu'elle se décompose ou se recompose. C'est aussi ce qu'on observe dans les phénomènes migratoires. C'est encore ce qui peut survenir lorsque le temps social se désorganise et fait coexister des ralentissements des blocages et des accélérations. Dans ce nouveau livre Michel Delage se propose de nous montrer en quoi le temps est une donnée essentielle pour comprendre l'apparition de certains troubles psychiques ou tout simplement certaines difficultés à vivre dans nos sociétés hypermodernes. Michel Delage est psychiatre ancien professeur du Service de santé des armées ancien chef de service l'hôpital d'instruction des armées Sainte Anne Toulon Thérapeute familial il a spécialement orienté sa pratique sur l'étude du traumatisme et la compréhension des liens d'attachement au sein de la famille. Il a notamment publié *La Résilience familiale* Famille et résilience avec Boris Cyrulnik *La Vie des motions et l'Attachement* dans la famille et plus récemment *La Mémoire sans souvenir* avec Antoine Lejeune.

La Mémoire sans souvenir Michel Delage, Antoine Lejeune, 2017-03-01 Quand on parle de mémoire on pense presque toujours aux souvenirs ceux qui font de chacun de nous des êtres singuliers. Personne n'a en effet la même vie la même histoire. Mais il existe une autre mémoire tout aussi essentielle et qui ne contient aucun souvenir conscient. C'est elle qui organise notre insu nos habitudes nos comportements nos relations tout en tant que notre vie motionnelle. Quels sont les mécanismes auxquels obéit cette force souterraine qui peut tout autant et sans que nous le sachions nous donner le goût de vivre que nous enfermer dans la routine. Que devient notamment cette mémoire implicite quand on vieillit ou qu'on développe une maladie neurodégénérative. Faut-il y voir un nouvel inconscient. C'est en tout cas ce que propose de montrer cet ouvrage. Un voyage au cœur d'une mémoire mal connue et qui pourtant gouverne une grande part de notre existence. Notre insu. Antoine Lejeune est neurologue. Ancien responsable d'une consultation mémoire au centre Saint Thomas Aix en Provence il est l'auteur de plusieurs ouvrages sur le vieillissement et la résilience. Michel Delage est psychiatre. Ancien professeur du service de santé des armées ancien chef de service l'hôpital d'instruction des armées Sainte Anne Toulon.
