and the 1980s, the 1990s, and the 2000s. The 1990s were a period of rapid growth and change, with the economy expanding and the population increasing. The 2000s were a period of relative stability, with the economy growing at a slower rate and the population continuing to increase. The 2010s were a period of significant challenges, with the economy slowing down and the population beginning to decline. The 2020s are a period of uncertainty, with the economy and population both facing significant challenges.

- **COOL**—A forced-air flow from the furnace through the evaporator coil, conditioned by the air conditioner, is distributed through the ductwork.
- **HEAT**—An air conditioning system where the evaporator coil is placed in the furnace, with warm air flow through the ductwork system to the windows and other areas of the house. Used when the system will provide maximum heating and cool most of the house, except the evaporator coil, which is located in the furnace.
- **HEAT/COOL**—An air conditioning system where both, conditioned and unconditioned air, is distributed through the ductwork system to the windows and other areas of the house. Used when the system will provide maximum heating and cooling.
- **HEAT/VENT**—An air conditioning system where both, conditioned and unconditioned air, is distributed through the ductwork system to the windows and other areas of the house. Used when the system will provide maximum heating and cooling.
- **VENT**—Fresh, outside air is directed through the evaporator coil, conditioned by the air conditioner, and is distributed through the ductwork system to the windows and other areas of the house. Used in a heat recovery system, where refrigeration is not required. This is a heat recovery system, where the refrigeration system compressor turned off, with the refrigeration system compressor turned off.
- **WATER**—Fresh, outside air is directed through the burner unit, with a small amount to the evaporator coil. A heat recovery system, where the refrigeration system compressor turned off, with the refrigeration system compressor turned off.
- **HEAT/VENT**—The compressor will operate to provide both, conditioned and unconditioned air to the windows and other areas of the house. Used in a heat recovery system, where the refrigeration system compressor turned off, with the refrigeration system compressor turned off.

TEMPERATURE CONTROL LEVER - The temperature control lever regulates the temperature of the air entering the passenger compartment. Position of the lever determines air temperature in any of the operating positions of the Air Control Lever.

FAN CONTROL LEVER - The fan control lever (FCL) provides speed control of the blower fan in all AIR CONTROL LEVER positions except OFF.

NOTICE: The fan may run whenever the ignition switch is turned to RUN (except, in some cases, under cold temperature conditions). This feature helps provide a supply of outside fresh air flow into the A/C system.

For proper operation of the air conditioning system, car windows should
