Not only is it well written, concise and hugely informative, it is also a timely intervention addressing truly global challenges. Quite simply a must read. Eva Hemmungs Wirtén, Uppsala University, Sweden. Rimmer provides a much needed well written authoritative book on the intellectual property aspects of climate change, natural disasters, clean vehicles and renewable energy. The book is essential reading for those wishing to better understand the complex patent issues involved with transitioning away from our current fossil dominated economy to a more environmentally sustainable and equitable energy future. Benjamin K Sovacool, National University of Singapore. In the wake of the international summits in Copenhagen and Cancun, there is an urgent need to consider the role of intellectual property law in encouraging research, development and diffusion of clean technologies to mitigate and adapt to the effects of climate change. This book charts the patent landscapes and legal conflicts emerging in a range of fields of innovation, including renewable forms of energy such as solar power, wind power and geothermal energy, as well as biofuels, green chemistry, green vehicles, energy efficiency and smart grids. As well as reviewing key international treaties, this book provides a detailed analysis of current trends in patent policy and administration in key nation states and offers clear recommendations for law reform. It considers such options as technology transfer, compulsory licensing, public sector licensing and patent pools, and analyses the development of Climate Innovation Centres, the Eco Patent Commons and environmental prizes such as the L Prize, the H Prize and the X Prizes. This book will have particular appeal to policy makers given its focus upon recent legislative developments and reform proposals, as well as legal practitioners by developing a better understanding of recent legal, scientific and business developments and how they affect their practice.
