Knowledge and Data Management in GRIDs Domenico Talia, Angelos Bilas, Marios D. Dikaiakos, 2007-02-15 Data and knowledge play a key role in both current and future GRIDs. The issues concerning representation, discovery and integration of data and knowledge in dynamic distributed environments can be addressed by exploiting features offered by GRID Technologies. Current research activities are leveraging the GRID for the provision of generic and domain specific solutions and services for data management and knowledge discovery. Knowledge and Data Management in GRIDs is the third volume of the CoreGRID series and brings together scientific contributions by researchers and scientists working on storage, data and knowledge management in GRID and Peer to Peer systems. This volume presents the latest GRID solutions and research results in key areas of knowledge and data management such as distributed storage management, GRID databases, Semantic GRID and GRID aware data mining. Knowledge and Data Management in GRIDs is designed for a professional audience composed of researchers and practitioners in industry. This book is also suitable for graduate level students in computer science.

Service-Oriented Distributed Knowledge Discovery Domenico Talia, Paolo Trunfio, 2012-10-05 A new approach to distributed large scale data mining: service oriented knowledge discovery extracts useful knowledge from today's often unmanageable volumes of data by exploiting data mining and machine learning distributed models and techniques in service oriented infrastructures. Service Oriented Distributed Knowledge Discovery presents techniques, algorithms and systems based on the service oriented paradigm. Through detailed descriptions of real software systems it shows how the techniques, models and architectures can be implemented. The book covers key areas in data mining and service oriented computing. It presents the concepts and principles of distributed knowledge discovery and service oriented data mining. The authors illustrate how to design services for data analytics, describe real systems for implementing distributed knowledge discovery applications and explore mobile data mining models. They also discuss the future role of service oriented knowledge discovery in ubiquitous discovery processes and large scale data analytics. Highlighting the latest achievements in the field, the book gives many examples of the state of the art in service oriented knowledge discovery. Both novices and more seasoned researchers will learn useful concepts related to distributed data mining and service oriented data analysis. Developers will also gain insight on how to successfully use service oriented knowledge discovery in databases, KDD frameworks.

Handbook of Research on E-Business Standards and Protocols: Documents, Data and Advanced Web Technologies Kajan, Ejub, Dorloff, Frank-Dieter, Bedini, Ivan, 2012-02-29 Electronic business is a major force shaping the digital world. Yet despite of years of research and standardization efforts many problems persist that prevent e business from achieving its full potential. Problems arise from different data vocabularies, classification schemas, document names, structures, exchange formats and their varying roles in business processes. Non standardized business terminology, lack of common acceptable and understandable processes, grammar and lack of common dialog rules, protocols create barriers to improving

Workflows for e-Science Ian J. Taylor, Ewa Deelman, Dennis B. Gannon, Matthew Shields, 2007-12-31 This collection of articles on Work flows for e Science is very timely and portant Increasingly to attack the next generation of scienti c problems multidisciplinary and distributed teams of scientists need to collaborate to make progress on these new Grand Challenges Scientists now need to access and exploit computational resources and databases that are geographically distributed through the use of high speed networks Virtual Organizations or VOs must be established that span multiple administrative domains and or institutions and which can provide appropriate authentication and author ation services and access controls to collaborating members Some of these VOs may only have a eeting existence but the lifetime of others may run into many years The Grid community is attempting to develop both sta ards and middleware to enable both scientists and industry to build such VOs routinely and robustly This of course has been the goal of research in distributed computing for many years but now these technologies come with a new twist service orie ation By specifying resources in terms of a service description rather than allowing direct access to the resources the IT industry believes that such an approach results in the construction of more robust distributed systems The industry has therefore united around web services as the standard technology
