Male Reproductive Toxicology Robert E. Chapin, Jerrold J. Heindel, 2013-10-22 Methods in Toxicology Volume 3 Male Reproductive Toxicology Part A deals with the male reproductive system and discusses methods that will help identify toxicant induced changes at all levels in living organisms It is important to realize that a toxic effect does not occur in a vacuum All work in toxicology must be predicated on a demonstrated adverse effect in vivo If good toxicology cannot exist in a vacuum then there must be a structure Thus the book begins by presenting a few models as examples of the ways experiments could be grouped to define the toxicity of a chemical This is followed by separate chapters on methods such as male mouse sexual behavior test in vitro techniques for assessing pituitary secretory function histological methods for preservation of the rat testis procedures for assessing testicular sperm head counts in mice rats and dogs and guidelines for conducting rodent dominant lethal tests Subsequent chapters cover topics such as methods for the isolation and purification of Leydig cells from rat and mouse testes and techniques used in semen analysis and fertility assessment in the rabbit

Population growth and global health disparities for many reproductive and perinatal outcomes are but a few of the pressing issues facing public health today Despite growing interest in the field formal training in reproductive and perinatal epidemiology remains limited with few available textbooks aimed at providing an overview of the field In response to this need faculty from the Eunice Kennedy Shriver National Institute of Child Health Human Development NICHD and CIHR s Institute of Human Development Child and Youth Health IHDCYH developed an intensive competitive Summer Institute in Reproductive and Perinatal Epidemiology The curriculum of this Summer Institute has been developed into a textbook to provide students and researchers with a working knowledge of the substantive and methodologic issues underlying reproductive and perinatal epidemiology Reproductive and Perinatal Epidemiology offers a core curriculum that addresses the epidemiology of major reproductive and perinatal outcomes From human fecundity to birth and neonatal outcomes the subject is approached from as international a perspective as possible and the unique methodologic issues underlying each

outcome are discussed Developed by leading researchers in collaboration with their students in response to their needs and concerns this is the definitive textbook on the subject **Oxford Handbook of Reproductive Medicine and Family Planning** Enda McVeigh,Roy Homburg,John Guillebaud,2008-03-27 This handbook provides practical evidence based guidance on the care of adolescents reproductive age females and males Divided into three sections it follows chronological age up to the menopause covering areas such as the reproductive system puberty the menstrual cycle contraceptive methods and infertility [A Companion to the Anthropology of Reproductive Medicine and Technology](#) Cecilia Coale Van Hollen,Nayantara Sheoran Appleton,2023-09-22 Provides fresh perspectives on the past present and future facing contributions of the anthropology of reproduction A Companion to the Anthropology of Reproductive Medicine and Technology provides a timely and comprehensive overview of the anthropological study of reproductive practices technologies and interventions in a global context Exploring the medical and technological management of human reproduction through a sociocultural lens this groundbreaking volume reviews past and current research discusses contemporary debates and recent theoretical developments introduces key themes and trends examines ongoing issues of equity inclusivity and reproductive justice around the world and more The Companion brings together essays by multidisciplinary scholars in fields including sociocultural anthropology medical anthropology reproductive health global public health Science and Technology Studies STS gender and sexuality studies critical race studies and environmental studies to list but a few Five thematically organized sections address reproductive practitioners and paradigms global reproductive health and interventions reproductive justice the life course approach to the study of reproductive health and the future of reproductive technology and medicine Using clear jargon free language the authors investigate pregnancy and childbirth fertility treatments birth control contraception and abortion COVID 19 and reproduction reproductive cancers epigenetics social discrimination gender and sexualities and reproduction for LGBTQIA communities race and reproduction migration and reproduction reproduction and war reproductive health financing reproduction and disabilities reproduction and the environment and other important contemporary topics A cutting edge guide to the modern study of reproduction this groundbreaking volume Provides an overview of the links between anthropological study and progressive work in medicine healthcare and technology Addresses both the challenges and opportunities facing researchers in the field Identifies gaps in current scholarship and offers recommendations for future research topics and methodologies Highlights the importance of ethnographic research combined with critical engagements with other disciplines for the anthropology of reproduction Explores the impact of socioeconomic conditions environmental challenges public policy and legislation on reproductive health outcomes Traces the history of the field and demonstrates how anthropologists have engaged with issues of reproductive justice Part of the acclaimed Wiley Blackwell Companions to Anthropology series A Companion to the Anthropology of Reproductive Medicine and Technology is an essential resource for undergraduate and graduate students
