Skye English Edition:

Beautiful New Sky Ines Geipel, 2024-10-15 It was a bold ambitious and wildly arrogant idea extending the reach of communism into space Spurred on by the defeat of Hitler and the competitive rivalry with the United States the Soviet space programme saw a frenetic surge of scientific activity focused on the objective of demonstrating Communist mastery beyond the confines of the Earth In order to create the optimally standardized bodies that cosmonauts would require top secret military laboratories were set up in 1970s East Germany The New Man the modern colonist of space was intensively trained for the purpose of surviving years of weightlessness in outer space Experiments were carried out in prisons hospitals and army barracks with the aim of creating the perfect body self sufficient and able to endure extreme conditions for as long as possible In order to exert dominance over space it was first necessary to exert total control over those who were being trained to conquer it Ines Geipel unravels this largely unknown and extraordinary history by delving into East German military records and talking to those who bear the scars of this state inflicted trauma Some of the older scientists conducting experiments had already served under the Nazi regime others threw themselves into collaborating with the Stasi via the military research programme in order to avoid dealing with the war s emotional legacy Written like a thriller and infused with empathy from someone who had herself experienced the debilitating effects of state administered doping programmes in the former GDR this book exposes some of the most disturbing episodes in Germany s recent past **Sky Stories** Roger Ptak, 1998 Most of the constellations the patterns of stars found in the night sky are connected with the ancient myths which people developed to give meaning to what they saw in the sky based on the experience of their culture The ideas of modern astronomy play a similar role for us today They are stories which help us understand the phenomena we discover when we look deeper into the sky than is possible with eyes alone In this book the ancient sky stories and those of modern astronomy are woven together in a unique way Coverage includes twenty four important constellations as well as the sun and the moon and the sky as a whole For each of these one of the old stories is tied together with the astronomical understanding of a key feature in that part of the sky allowing one story to serve as a reminder for the other When They Severed Earth from Sky Elizabeth Wayland Barber, Paul T. Barber, 2012-01-02 Why were Prometheus and Loki envisioned as chained to rocks What was the Golden Calf Why are mirrors believed to carry bad luck How could anyone think that mortals like Perseus Beowulf and St George actually fought dragons since dragons don t exist Strange though they sound however these myths did not begin as fiction This absorbing book shows that myths originally transmitted real information about real events and observations preserving the information sometimes for millennia within nonliterate societies Geologists interpretations of how a volcanic cataclysm long ago created Oregon s Crater Lake for example is echoed point for point in the local myth of its origin The Klamath tribe saw it happen and passed down the story for nearly 8 000 years We however have been literate so long that we ve forgotten how myths encode reality Recent studies of how our brains work applied to a wide range of data

from the Pacific Northwest to ancient Egypt to modern stories reported in newspapers have helped the Barbers deduce the characteristic principles by which such tales both develop and degrade through time Myth is in fact a quite reasonable way to convey important messages orally over many generations although reasoning back to the original events is possible only under rather specific conditions Our oldest written records date to 5 200 years ago but we have been speaking and mythmaking for perhaps 100 000 This groundbreaking book points the way to restoring some of that lost history and teaching us about human storytelling

The Geology of Scotland, 4th edition N. H. Trewin, 2003-02-24 This 4th edition of *The Geology of Scotland* is greatly expanded from the previous edition with 34 authors contributing to 20 chapters A new format has been adopted to provide a different perspective on the geology of Scotland A brief introduction is followed by a chapter outlining some of the important historical aspects that in the 19th century placed Scottish geologists in the forefront of a new science Scotland is constructed from a number of terranes that finally combined in roughly their present positions prior to about 410 million years ago Thus the geology of each terrane is described up the time of amalgamation providing chapters on the Southern Uplands Midland Valley Highlands Grampian and Hebridean terranes At the end of this section a brief synthesis summarizes the events that resulted in the amalgamation of the various terranes into the present configuration Traditional practice is followed in the description of the Old Red Sandstone Carboniferous Permo Trias Jurassic Cretaceous tertiary and Quaternary strata A separate chapter covers Tertiary igneous rocks An attempt is made to tell the story of the geological evolution of Scotland rather than catalogue all areas and formations Priority is given to the onshore geology encouraging the reader to go into the field and visit some of the world class geology on show in Scotland The chapters are broadly based attempting to integrate the sedimentary and igneous histories and summarize changes in palaeogeography and palaeoenvironments Economic aspects are covered with chapters on Metalliferous Minerals Bulk Resources Coal and Hydrocarbons A new departure is the chapter on aspects of Environmental Geology and sustainability Additionally this publication contains a colour section of 32 plates illustrating aspects of Scottish Geology as well as a coloured geological map of Scotland

Literature 1977, Part 2 Siegfried Böhme, Ute Esser, Walter Fricke, Inge Heinrich, Dietlinde Krahn, Lutz D. Schmadel, Gert Zech, 2013-03-14 *Astronomy and Astrophysics Abstracts* which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 *Astronomy and Astrophysics Abstracts* aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 20 contains

literature published in 1977 and received before February 20 1978 some older literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J BouSka Prague who surveyed journals and publications in Czech and supplied us with abstracts in English and by Prof P Brosche Bonn who supplied us with literature concerning some border fields of astronomy

This Earth, That Sky Manuel Bandeira, 2024-06-28 This is a generous long overdue presentation of the major Brazilian poet Manuel Bandeira 1886 1968 to the English speaking reader Well over a hundred poems appear here in both Portuguese and English together with a critical overview that introduces the poet and Brazilian poetry to the nonspecialist and contributes significantly to the existing body of Bandeira scholarship Bandeira s poetry not only stands among the most important in twentieth century Brazil but also embodies the experience of transition from one literary movement to another The poems span a half century of writing from the publication of Bandeira s first book in 1917 to the definitive edition of his collected work in 1966 Because critics agree that the poet s most influential creative efforts began in 1930 with the publication of *Libertinagem* *Libertinism* the collection concentrates on the later period A smaller number of poems drawn from the three books published before this date provide a useful basis for comparison Candace Slater s fine versions of the poems are augmented by a translator s note that considers Bandeira s poetic language in terms of the particular challenges it offers the translator into English Her introduction offers a fresh and comprehensive look at the poet whose artistic transformation from nineteenth century modes of expression to experimental twentieth century Modernism paralleled the transformation of his country It focuses on the poet s continuing alternation between an acceptance of if not allegiance to the material world and a desire for something more This fundamental though often subtle opposition is reflected in the title *This Earth That Sky* This title is part of UC Press s *Voices Revived* program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 *Voices Revived* makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1989

An Evaluation of Formulas for Estimating Clear-sky Insolation Over the Ocean Ronald K. Reed, 1975 Recent oceanic data and observations from five coastal sites in the National Weather Service solar radiation network are compared with a formula for computing clear sky insolation derived from the Smithsonian Meteorological Tables using a transmission coefficient of 0.7 The results are generally in good agreement and they suggest that this formula is suitable for computing insolation over the ocean for a wide range of latitudes The comparison also indicates that a correction to the formula for middle latitudes is not warranted The one other formula in good agreement with that from the Smithsonian Tables is one derived by Lumb Laevastu s formula is only acceptable at sun angles less than 50 and Berliand s estimates are too high at all solar altitudes The formula from the Smithsonian Tables can be used to compute insolation over the oceans with a random error of estimate probably not exceeding 5% for periods of a few days or longer
