

Homework 2.5 – Solving Polynomial Equations

1) Determine the solutions of the following polynomials.

a) $(3x + 2)(x + 9)(x - 2) = 0$

b) $(x^2 + 1)(x - 4) = 0$

2) Determine the solutions of the following polynomials by factoring. Use the tools you have learned this unit to help you. (remainder theorem, integral zero theorem, division etc.)

a) $x^3 - 4x^2 - 3x + 18 = 0$

b) $x^3 - 3x^2 - 4x + 12 = 0$

Nonlinear System Dynamics W. Richard Kolk,Robert A. Lerman,2012-12-06 Engineers scientists and applied mathematicians are habitually curious about behavior of physical systems More often than not they will model the system and then analyze the model hoping to expose the system's dynamic secrets Traditionally linear methods have been the norm and nonlinear effects were only added peripherally This bias for linear techniques arises from the consummate beauty and order in linear subspaces and the elegance of linear independence is too compelling to be denied And the bias has been in the past fortified by the dearth of nonlinear procedures rendering the study of nonlinear dynamics untidy But now a new attractiveness is being conferred on that non-descript patchwork and the virtue of the hidden surprises is gaining deserved respect With a wide variety of individual techniques available the student and the engineer as well as the scientist and researcher are faced with an almost overwhelming task of which to use to help achieve an understanding sufficient to reach a satisfying result If linear analysis predicts system behavior sufficiently close to reality that is delightful In the more likely case where nonlinear analysis is required we believe this text fills an important void We have tried to compile and bring some order to a large amount of information and techniques that although well known is scattered We have also extended this knowledge base with new material not previously published **Teaching Secondary and Middle School**
