Write the answer of each section on a new page.

### **SECTION – A**

Select and write the correct answer for the following multiple choice type of questions :

[10]

- (i) Histones are rich in .....  
(a) Lysine and arginine (b) Leucine and methionine  
(c) Serine and leucine (d) Phenylalanine and lysine (1)
- (ii) How many mitotic divisions take place during the formation of a female gametophyte from a functional megaspore?  
(a) One (b) Two  
(c) Three (d) Four (1)
- (iii) Which of the following is the only gaseous plant growth regulator?  
(a) ABA (b) Cytokinin  
(c) Ethylene (d) Gibberellin (1)
- (iv) The pH of nutrient medium for plant tissue culture is in the range of .....  
(a) 2 to 4.2 (b) 5 to 5.8  
(c) 7 to 7.5 (d) 8 to 9.5 (1)

**Crop Productivity and Protection** Dinesh K. Maheshwari,K. Annapurna,2017-11-14 This book reviews the latest developments in our understanding of microbial endophytes and their potential applications in enhancing productivity and disease protection It covers all the latest discoveries regarding endophytes their interactions with plants and application in agricultural productivity and protection Our understanding of endophytes has increased exponentially in recent decades These microbes such as fungi bacteria and actinobacteria establish a symbiotic or parasitic association with plants A better understanding of endophytic microorganisms may help to elucidate their functions and potential role in developing sustainable systems of crop production and improved protection against biotic stresses Endophytes play a vital role in plant growth and health promotion Endophytic bacteria are of agrobiological interest because they create host endophyte relationships which can open exciting prospects for newer biotechnological applications Endophytes have also proven to be a beneficial and sustainable alternative to agrochemicals due to their role in the biocontrol of pests and diseases Further endophytes are essential to the production of several secondary metabolites in grasses in the process of gummosis in trees and the production of useful metabolites such as alkaloids pestalocide cryptocandin enfumafungin subglutinols etc for the host plant They are also involved in the production of enzymes biosurfactants biocontrol agents and plant growth promoters As such it is imperative that we explore these products industrial applications in the fields of biotechnology pharmacy and agriculture This volume will offers a valuable guidance for botanists microbiologists biotechnologists molecular biologists environmentalists policymakers conservationists and those working for the protection of plant species of agricultural and medicinal importance      **Seagrasses of Australia** Anthony W. D. Larkum,Gary A. Kendrick,Peter J. Ralph,2018-07-27 This book takes the place of *Biology of Seagrasses A Treatise on the Biology of Seagrasses with Special Reference to the Australian Region* co edited by A W D Larkum A J MaCComb and S A Shepherd and published by Elsevier in 1989 The first book has been influential but it is now 25 years since it was published and seagrass studies have progressed and developed considerably since then The design of the current book follows in the steps of the first book There are chapters on taxonomy floral biology biogeography and regional studies The regional studies emphasize the importance of Australia having over half of the world s 62 species including some ten species published for Australia since the previous book There are a number of chapters on ecology and biogeography fish biology and fisheries and dugong biology are prominent chapters Physiological aspects again play an important part including new knowledge on the role of hydrogen sulphide in sediments and on photosynthetic processes Climate change pollution and environmental degradation this time gain an even more important part of the book Decline of seagrasses around Australia are also discussed in detail in several chapters Since the first book was published two new areas have received special attention blue carbon and genomic studies Seagrasses are now known to be a very important player in the formation of blue carbon i e carbon that has a long turnover time in soils and sediments

Alongside salt marshes and mangroves seagrasses are now recognized as playing a very important role in the formation of blue carbon And because Australia has such an abundance and variety of seagrasses their role in blue carbon production and turnover is of great importance The first whole genomes of seagrasses are now available and Australia has played an important role here It appears that seagrasses have several different suites of genes as compared with other land plants and even in comparison with freshwater hydrophytes This difference is leading to important molecular biological studies where the new knowledge will be important to the understanding and conservation of seagrass ecosystems in Australia Thus by reason of its natural abundance of diverse seagrasses and a sophisticated seagrass research community in Australia it is possible to produce a book which will be attractive to marine biologists coastal scientists and conservationists from many countries around the world
