Technical Manual United States. War Department, 1944 *NOAA Technical Report NMFS.* , 1984 *Manual of Navy Enlisted Classifications* United States. Bureau of Naval Personnel, 1962 **Soil Survey Manual (U.S. Department of Agriculture Handbook No. 18)** U.S. Department of Agriculture, 2019-04-06 The Soil Survey Manual USDA Handbook No 18 provides the major principles and practices needed for making and using soil surveys and for assembling and using related data The term soil survey is used here to encompass the process of mapping describing classifying and interpreting natural three dimensional bodies of soil on the landscape This work is performed by the National Cooperative Soil Survey in the United States and by other similar organizations worldwide The Manual provides guidance methodology and terminology for conducting a soil survey but does not necessarily convey policies and protocols required to administer soil survey operations The soil bodies contain a sequence of identifiable horizons and layers that occur in repeating patterns in the landscape as a result of the factors of soil formation as described by Dokuchaev 1883 and Jenny 1941 *Field & Stream* , 1985-02 FIELD STREAM America s largest outdoor sports magazine celebrates the outdoor experience with great stories compelling photography and sound advice while honoring the traditions hunters and fishermen have passed down for generations

Soil Survey Manual United States. Bureau of Plant Industry, Soils, and Agricultural Engineering, 1951 *Manual of Navy Enlisted Manpower and Personnel Classifications and Occupational Standards* United States. Bureau of Naval Personnel, 1949 **Field & Stream** , 1985-02 FIELD STREAM America s largest outdoor sports magazine celebrates the outdoor experience with great stories compelling photography and sound advice while honoring the traditions hunters and fishermen have passed down for generations *Manual of Enlisted Navy Job Classifications* United States. Bureau of Naval Personnel, 1959 *Elasmobranchs as Living Resources* Harold L. Pratt, Samuel H. Gruber, Toru Taniuchi, 1990 **Tracking the Wanders of Nature** Clas Veibäck, 2018-11-20 Target tracking is a mature topic with over half a century of mainly military and aviation research The field has lately expanded into a range of civilian applications due to the development of cheap sensors and improved computational power With the rise of new applications new challenges emerge and with better hardware there is an opportunity to employ more elaborated algorithms There are five main contributions to the field of target tracking in this thesis Contributions I IV concern the development of non conventional models for target tracking and the resulting estimation methods Contribution V concerns a reformulation for improved performance To show the functionality and applicability of the contributions all proposed methods are applied to and verified on experimental data related to tracking of animals or other objects in nature In Contribution I sparse Gaussian processes are proposed to model behaviours of targets that are caused by influences from the environment such as wind or obstacles The influences are learned online as a part of the state estimation using an extended Kalman filter The method is also adapted to handle time varying influences and to identify dynamic systems It is shown to improve accuracy over the nearly constant velocity and

acceleration models in simulation The method is also evaluated in a sea ice tracking application using data from a radar on Svalbard In Contribution II a state space model is derived that incorporates observations with uncertain timestamps An example of such observations could be traces left by a target Estimation accuracy is shown to be better than the alternative of disregarding the observation The position of an orienteering sprinter is improved using the control points as additional observations In Contribution III targets that are confined to a certain space such as animals in captivity are modelled to avoid collision with the boundaries by turning The proposed model forces the predictions to remain inside the confined space compared to conventional models that may suffer from infeasible predictions In particular the model improves robustness against occlusions The model is successfully used to track dolphins in a dolphinarium as they swim in a basin with occluded sections In Contribution IV an extension to the jump Markov model is proposed that incorporates observations of the mode that are state independent Normally the mode is estimated by comparing actual and predicted observations of the state However sensor signals may provide additional information directly dependent on the mode Such information from a video recorded by biologists is used to estimate take off times and directions of birds captured in circular cages The method is shown to compare well with a more time consuming manual method In Contribution V a reformulation of the labelled multi Bernoulli filter is used to exploit a structure of the algorithm to attain a more efficient implementation Modern target tracking algorithms are often very demanding so sound approximations and clever implementations are needed to obtain reasonable computational performance The filter is integrated in a full framework for tracking sea ice from pre processing to presentation of results

Med ljustning av target tracking i ett virtuellt utforskat område med en historia som sträcker sig tillbaka till tminstone 30 talet Det är väldigt en handfull nationer om att snabbast kunna upptäcka fienden innan det var för sent Traditionellt sett har man ljustning fortsatt att vara starkt förknippat med militära tillämpningar och flygfart Det är först på senare år som billiga och kommersiellt tillgängliga sensorer har öppnat upp för en mer betydligt fredligare användningsområde Den med ljustning skulle kunna beskrivas som lokalisering av förmodade objekt genom att samla in data från sensorer Den här avhandlingen behandlar framförallt med ljustning av olika sorters djur där data samlas in med videokameror Det finns två bakomliggande syften Det ena handlar om att underlätta forskning för biologer och det andra handlar om att skapa tekniska lösningar för att underlätta skyddet av sällsynta djur

Med ljustning av drivis där data samlas in med radar behandlas Trots den viktiga skilda tillämpningen är många metoder desamma Syftet är att hantera drivis i norra ishavet där detektion och med ljustning är viktiga komponenter för att undvika kollisioner Biologer lägger ofta en ansevärd mängd tid på att samla in, annotera och sortera data Det är tid som kan spenderas på mer givande forskningsaktiviteter Med videokamera, bildbehandling och moderna algoritmer för med ljustning är det möjligt att i vissa fall automatisera datainsamlingen Med automatisering kan mer information samlas in med traditionella metoder och längre experiment kan ofta genomföras Ytterligare en fördel är att man kan minska påverkan på djuren

Parkvakterna i många nationalparker kämpar dagligen med intrång från tjuvgärdar De har ytterst begränsade resurser och uts

ter sina liv för stor fara Beständen minskar fortfarande för många djurarter som går en mörk framtid till mötes För att vända trenden behövs stora insatser på många fronter samtidigt Målförhållning kan bidra med att på ett kostnadseffektivt sätt tillhandahålla övervakning av nationalparker Kunsknad om var djuren befinner sig underlättar koordinering av parkvakternas insatser för att skydda djuren Målförhållning kan ske med ett flertal olika sensorer såsom radarer fast uppsatta och luftburna videokameror mikrofoner som lyssnar efter djurläten och även vittnesmål från parkvakterna All insamlad information bidrar till att skapa en helhetsbild av situationen i nationalparken om den används rätt Ishantering är ett viktigt område för oljeindustrin för att garantera säkerhet och undvika allvarliga olyckor Målet är att upptäcka och sprida is som flyter i havet och om möjligt vidta åtgärder för att undvika kollision Målet är att i förhållningen ställa upp ett stort nätverk av olika sensorer och databaser för att få en heltäckande bild av det aktuella läget Flera källor diskuteras såsom mark och fartygsradarer av olika slag satelliter nära med kameror och video-databaser Att skapa fullständiga och användbara lösningar för biologer parkvakter och oljeindustrin är väldigt ambitiöst såväl i avhandlingen presenteras bakomliggande teori för målförhållning varvat med författarens egna forskningsbidrag och lösningar för en handfull specifika problem och tillämpningar Det första projektet som presenteras är ett samarbete med Kolmårdens djurpark Biologer i djurparken studerar delfinernas beteende i förhållning I dagsläget markerar studenter för hand i video var delfinerna befinner sig i bassängen Med målförhållning samlas djurens positioner in automatiskt utan möjlig inblandning Det första bidraget i forskningen är utvecklingen av en modell för hur delfinerna rör sig i bassängen Det andra projektet som presenteras är ett samarbete med biologer vid Lunds universitet som studerar beteendet hos flyttglar I en metod från 60-talet mättes flyttglarnas rörelser i en tratt Från rapporten i tratten som orsakats vid flyttglarnas flyttfärd analyserar man riktningarna för flyttfärdens ken Med videokamera och målförhållning samlas djurens positioner in och enskilda flyttfärdens k detekteras automatiskt Det första bidraget i forskningen är en metod för att bättre utnyttja information från videon till att detektera flyttfärdens ken Det tredje projektet som presenteras är ett samarbete med Småtta Savanner En id som utforskas är möjligheten att använda parkvakternas vittnesmål om spridningen av noshringar för att förbättra målförhållningen ena sidan är data från videokameror och radarer väldigt noggranna i tiden men relativt osäkra i de uppmätta positionerna andra sidan kan positionen för ett spridningsområde samtidigt som det ofta är svårt att avgöra när noshringen var på platsen Genom att utnyttja informationen från båda källorna kan noshringarnas förflyttningar i parken kartläggas bättre Den bakomliggande teorin för observationer med osäker tid inom målförhållning är relativt utforskad Det första bidraget i forskningen är utvecklingen av en metod för att utnyttja sådana observationer Enkla simulerade fall används för att analysera metoden Metoden utvärderas även i en tillämpning för att förbättra den satellitbaserade positionsbestämningen av en orienterare genom att noggrant mäta positionen på kontrollerna Det fjärde projektet som presenteras är ett samarbete med Norges teknisk naturvetenskapelige universitet NTNU och Norut i Norge som samlat in radardata på Svalbard Det första bidraget är utvecklandet av en metod som visar hur lokala strömmar och vindar påverkar drivisen för att bättre kunna förutspå rörelser Ett annat bidrag i forskningen

är en förfining av formuleringen och implementationen av en modern algoritm för mätning. Projektet som alla har flera likheter och skillnader med varandra kan gemensamt sammanfattas med att de speglar rörelser eller vandringar i naturen.
