

# A step-by-step guide to the scientific method

By Gale, Cengage Learning, adapted by Newsela staff

Published: 11/09/2017

When you have a problem, how do you solve it? Do you consider what you already know about the problem, think of a possible answer and then see if your answer is correct? If so, you are using the scientific method. The scientific method is a way of carefully collecting evidence about a question or problem, using that evidence to form a possible answer and then testing the answer to see if it is right.

## What Are The Steps In The Scientific Method?

The scientific method has six steps, described below. They will help you solve all kinds of problems, in and out of school.

1. State a problem or ask a question.
2. Gather background information.
3. Form a hypothesis.
4. Design and perform an experiment.
5. Draw a conclusion.
6. Report the results.

### Step 1: State A Problem Or Ask A Question

To begin using the scientific method, think about the world around you. You may see something that makes you curious, such as your sandwich drying out by lunchtime on some days but not on others.

Brewer, Ludy T. Benjamin, Jr., 2001-08-01 Like its predecessors Volume III of the

Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology TOP, the official journal of the Society for the Teaching of Psychology Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, Issues and Approaches in Teaching Introductory Psychology, contains 52 articles on critical issues such as how to approach the course, understanding students' interests, perceptions, and motives, students' existing knowledge of psychology, including their misconceptions, a comparison of introductory textbooks, and tips on how to evaluate them, test questions, and student factors affecting exam performance; an overview of different forms of feedback, giving extra credit, and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.

*Motivating Reading Comprehension* Allan Wigfield, 2004-05-20. This text discusses motivating reading comprehension covering subjects such as classroom contexts for engaged reading, scaffolding for motivation and engagement in reading, the cognitive strategies of reading comprehension, and science inquiry in the CORI framework.

*Energy Gr. 1-3*, **Sign Out Science** Silvana Carletti, Suzanne Girard, Kathlene Willing, 1993. Using found and recycled materials, string, marbles, plastic containers, you can create more than twenty bags of simple science experiments for use in school and at home. The activities include background information, a vocabulary list, extension activities, and reproducible how-to sheets. Help kids answer their questions about the world around them.

Physical Science Grade 1 Bellaire, Tracy. The experiments in this book fall under seventeen topics that relate to four aspects of physical science: Materials, Objects, and Building Things; Energy In Our Lives; Force and Motion; and Creating Color. In each section, you will find teacher notes designed to provide you with guidance with the learning intention, the success criteria, materials needed, a lesson outline, as well as provide some insight on what results to expect when the experiments are conducted. Suggestions for differentiation are also included so that all students can be successful in the learning environment. This book supports many of the fundamental concepts and learning outcomes from the curriculums for these provinces: Manitoba Grade 1 Science Cluster 3 Characteristics of Objects; Ontario Grade 1 Science Understanding Structures; Saskatchewan Grade 1 Science Physical Science Using Objects Materials. 96 pages.
