**Management and Office Information Systems** Shi-Kuo Chang,2012-12-06 Decision making is a very complex phenomenon Modern decision makers must deal with very complex problems which are constantly changing and often ill structured making modeling and analysis difficult In order to provide support for the decision makers computer based information systems are designed to collect store process and transport information Recent advances in computer technology data communications database systems office automation and knowledge engineering have made possible the design of very sophisticated information systems However rapid technological advances also create many problems not the least of which is the lack of integration among the various disciplines in information system design Without such integration a costly computer based information system is at best partially useful and at worst totally useless The aim of this book therefore is to examine the various issues involved in designing management information systems decision support systems and office information systems for increasing productivity and providing decision support This book is the outcome of the Workshop on Management and Office Information Systems which was organized by the Knowledge Systems Institute and held at Chicago

Illinois from June 28 to 30 1982 Twenty seven papers from the working papers presented at that workshop were selected for inclusion in the present volume which is organized into five parts I organization structures and management II decision support systems III database systems IV office information systems and V systems and applications The Publishers' Trade List Annual, 1990
