### Key Technologies

**16:9 Full HD 1080p Resolution Panel** 16:9 Full HD 1080p resolution panel (1920x1080) accepts any HDTV signal and renders it with optimum resolution.

**Motionflow™ 120Hz technology** Motionflow™ 120Hz technology doubles the number of frames in incoming video content by creating and inserting sixty entirely new frames between the existing sixty frames in real time. In addition to creating new frames, Motionflow™ 120Hz technology also includes an Image Blur Reduction algorithm, which reduces source image blur captured by the camera, as well as a de-juddering circuit to help reduce jerking and stuttering during sweeping pans. The end result is smoother, more fluid motion that delivers a natural and realistic viewing experience.

**BRAVIA Engine™** BRAVIA Engine™ fully digital video processor uses a collection of unique Sony® algorithms to significantly reduce noise, enhance overall image detail, and optimize contrast so every scene produces sharp, vibrant, life-like images.

**Advanced Contrast Enhancer circuit (ACE)** Advanced Contrast Enhancer circuit (ACE) dynamically improves contrast, resulting in deep blacks in darker scenes without losing fine details in shadows and other dark areas of the picture.

**Dynamic Video Noise Reduction** Dynamic Video Noise Reduction adaptive technology analyzes the motion, sharpness, and brightness of each scene in real time to identify various types of noise and reduce unwanted artifacts without compromising the video signal.

**24p True Cinema™ capable** 24p True Cinema™ mode enables you to enjoy films at their intended 24 fps (frames per second) when viewed using a 24p capable output device, such as a Blu-ray Disc™ player.

**DLNA® compliant** DLNA® (Digital Living Network Alliance) compliance allows BRAVIA® VL160-Series HDTVs to access digital photos from DLNA-enabled PCs and other devices2.

**10-bit processor / 10-bit panel** 10-bit processor and 10-bit panel combine to create 64 times the levels of expression versus 8-bit panels, resulting in smoother transitions from color to color and faithful reproduction of subtle color changes.

**Operative Manual of Endoscopic Surgery 2** A. Cuschieri, G. Buess, J. Perissat, 2013-11-11 The second volume of Operative Manual of Endoscopic Surgery covers some of the operative endoscopic procedures which have been introduced into clinical practice since the publication of Vol 1 In the general section we have included an updated chapter on instrumentation and new chapters on anaesthetic management of patients undergoing endoscopic surgery and on video image and recording Both topics are of importance to the practice of endoscopic surgery and have not been adequately covered in the reported literature Volume 2 deals with endoscopic procedures in the chest and abdomen There have been significant advances in thoracoscopic surgery during the past 2 years particular references made to anatomical pulmonary resections and oesophageal resections As far as the gastrointestinal tract is concerned we have included gastric and allied operations but have not covered the colorectal region as we believe that more evaluation is needed before definitive accounts can be written on endoscopic colorectal resections especially for cancer For this reason we have decided to defer this important topic to Vol 3 which is in preparation The same applies to laparoscopic repair of abdominal hernias The same layout has been adopted as in Vol 1 of the series with heavy emphasis on illustrative representation of the operative steps and techniques In the diagrams on sites of trocar cannulae we have indicated not only the site and size but also the functional role of each port
