

# Simplifying Expressions

**Simplifying algebraic expressions** is when we use a variety of techniques to make algebraic expressions more efficient and compact – in their simplest form.

 **Example** Simplify  $8x + 4 + 3(2x - 3)$

**1** Expand the brackets  $8x + 4 + 3(2x - 3) = 8x + 4 + 6x - 9$

**2** Collect like terms  $8x + 4 + 6x - 9 = 14x - 5$

The simplified expression is  $14x - 5$

**Examples in algebra. [With] Answers** Thomas Mitcheson,1895 New simple ways to solve equations Einar Östmyren,2018-03-15 In this book I present a unique formula for quadratic equations which is a rewriting of the  $p q$  formula This rewriting resulted in the equations being solved almost twice as fast by the new formula when it was compared in a test with the  $p q$  formula Another test also showed that the new formula was much faster than the Vedic formula The new formula is unique because the equations in the test were solved by mere mental calculation which improves the memory and increases mental agility and intelligence When I discovered that the middle coefficient in a quadratic equation contains all information about its origin it led to a rule that simplified the solving of all equations In a quadratic equation the origin could be located and then it became possible to create a rule how the coefficients were to be split up into factors By means of this rule and some exercises the answer to an equation can be both calculated and checked regardless of how large the coefficients are This universal method is intended to be used before the equation is solved by a formula Since the origin of a quadratic equation could be located it was also simple to find the origin to other types of equations and therefore new methods could be created This led to the fact that a cubic equation could be solved without taking detours like polynomial division a guess or a test of a root When the origin of an equation can be located it is as easy to solve a fifth degree equation as a quadratic equation in the same simple way as unlocking a safe with a key The purpose of the book is mainly to make it as simple as possible for the students to solve equations but also to give them a good insight into the origin of an equation

*Making Sense of Equations* Randy Palisoc,2014-10-28 Whether you realize or not

mathematics is actually a language The purpose of a language is to communicate and mathematics is how we communicate about quantities and logical relationships We do so by using signs symbols and other mathematical terms One of the most important communication tools in the language of math is an equation When students can use equations fluently it helps them communicate in math more precisely and it helps them more easily make sense of math Equations help us solve a variety of problems from figuring out how many laps a swimmer must complete during her workout to figuring out how much it will cost to go on vacation Like any communication tool equations are full of nuances These countless little details can either cause a great deal of confusion or they can be opportunities to build precision and fluency Making Sense of Equations focuses on precision and fluency and it helps students notice the little details that have a big impact on understanding
