

WARNING

These instruments are designed to prevent accidental shock to the operator when properly used. However, an engineering design can never take all circumstances into account. Therefore, this manual must be read carefully and completely prior to making any measurements. Failure to follow directions can result in a serious or fatal accident.

SPICE WARNING: As defined in American National Standard C39.5, Safety Requirements for Electrical & Electronic Measuring & Controlling Instruments, a shock hazard shall be considered to exist at any point involving a potential in excess of 30 volts rms (not wave or 42.4 volts DC or peak) and where a leakage current from that point to ground exceeds 0.5 milliamperes, when measured with an appropriate measuring instrument defined in Section 11.6.1 of ANSI C39.5.

NOTE: The proper measuring instrument for the measurement of leakage current consists essentially of a network of a 1500 ohm non-inductive resistor shunted by a 0.15 microfarad capacitor connected between the terminals of the measuring instrument. The leakage current is that portion of the current that flows through the resistor. The Simpson Model 260-Series 3 AC Leakage Current Tester meets the ANSI C39.5 requirements for the measurement of AC leakage current and can be used for this purpose. To measure DC Leakage current, connect a 1500 ohm non-inductive resistor in series with the 260-6 1mA range and use this as the measuring instrument.
