Operational Law in International Straits and Current Maritime Security Challenges Jörg Schildknecht, Rebecca Dickey, Martin Fink, Lisa Ferris, 2018-05-26 This book addresses a wide range of contemporary operational maritime law issues across the spectrum of operations. It provides sophisticated analyses and insights and offers new interpretations of topics that are directly relevant for contemporary naval operations. The book examines unresolved legal issues in order to provide guidelines for conducting maritime operations and also offers reference material for general education on the law of naval operations. Further, it serves as a comprehensive resource for operational doctrine and military planning and presents an approach to dealing with multiple legal issues that demonstrates how modern military operations at sea can legally be executed. Focusing on operational and tactical topics, it is a valuable addition to the bookshelves of military lawyers and operators alike.

William Alphonso Murrill: The Naturalist Ronald H. Petersen, 2025-08-20 For the casual naturalist, William Alphonso Murrill's name is associated with a plethora of new species of fungi, his mysterious resignation from the New York Botanical Garden, his disappearance from New York and rediscovery as a free spirit in Florida. Pivotal were his years in New York City, of course, but the process through which he arrived there, the people who acted to shape him, and his activities while there, leading to his life-changing trauma, have not been previously adequately summarized. Three academic biologists were especially important to his development: George Francis Atkinson at Cornell, Lucien Marcus Underwood at Columbia, and Nathaniel Lord Britton at The New York Botanical Garden. Other individuals appeared omnipresent to the story: John Torrey, John Newberry, and Seth Low, the latter President of Columbia University and Mayor of New York City. The Torrey Botanical Club played an important role in Murrill's integration in the city and the spread of his name to the wider biology community. Edna, the love of his life, and his wife remains a mysterious personage. The articulation of forces, individuals, and the times combined to produce an interesting man attempting to forge his own path as *The Naturalist*. Unlike most academics, Murrill left several autobiographical publications, often allegorical, which furnish material on his developing years. George Weber, who spent considerable time with Murrill in advanced life, penned a memorial from which valuable information has been gathered. Jim Kimbrough, 2003 Murrill's successor as mycologist at the University of Florida, wrote a more informal sketch of Murrill's last years. This book serves as a comprehensive biography of William Alphonso Murrill's fascinating and mysterious life career.

Continuous Time Modeling in the Behavioral and Related Sciences Kees van Montfort, Johan H.L. Oud, Manuel C. Voelkle, 2018-10-11 This unique book provides an overview of continuous time modeling in the behavioral and related sciences. It argues that the use of discrete time models for processes that are in fact evolving in continuous time produces problems that make their application in practice highly questionable. One main issue is the dependence of discrete time parameter estimates on the chosen time interval, which leads to incomparability of results across different observation intervals. Continuous time modeling by means of differential equations offers a powerful approach for

studying dynamic phenomena yet the use of this approach in the behavioral and related sciences such as psychology sociology economics and medicine is still rare This is unfortunate because in these fields often only a few discrete time sampled observations are available for analysis e g daily weekly yearly etc However as emphasized by Rex Bergstrom the pioneer of continuous time modeling in econometrics neither human beings nor the economy cease to exist in between observations In 16 chapters the book addresses a vast range of topics in continuous time modeling from approaches that closely mimic traditional linear discrete time models to highly nonlinear state space modeling techniques Each chapter describes the type of research questions and data that the approach is most suitable for provides detailed statistical explanations of the models and includes one or more applied examples To allow readers to implement the various techniques directly accompanying computer code is made available online The book is intended as a reference work for students and scientists working with longitudinal data who have a Master's or early PhD level knowledge of statistics [The Audio-visual Equipment Directory](#) ,1979 [JTN](#) ,1988 [Catalog of Copyright Entries.
