

When to perform mobile compatibility testing?

Mobile compatibility testing should be integrated throughout the app development lifecycle:

- **Early Stages:** Test on a representative set of devices during the initial development phase to identify and address compatibility issues early on.
- **During Development:** Conduct initial testing on emulators/simulators to catch early issues.
- **Pre-Release:** Perform extensive testing on a variety of real devices and operating systems to ensure readiness for launch.
- **Post-Release:** Continuously test new updates and features to maintain compatibility with new devices and OS updates.

How to use emulators/simulators for mobile app compatibility testing?

Emulators and simulators are software tools that mimic mobile devices' hardware and software environments. They are useful for:

- **Initial Testing:** Quick and cost-effective testing during the early stages of development.
- **Automated Testing:** Integration with automated testing frameworks to perform repetitive tests across various virtual devices.
- **Diverse Configurations:** Easily testing multiple OS versions and device configurations without the need for physical devices.

Simulators Derailed: Technology Compatibility and Social Systems Gregory Tibbits, 2014-11-03 Simulator technology for training is well received and much used in many industries particularly the aviation industry However in the rail industry it is not well accepted by its primary users train drivers and is not used to its full potential A theoretical framework to analyse culture originally proposed by Pierre Bourdieu and in particular his concepts of capital field and habitus are used to explain the compatibility and the use of the simulator The main finding of this study is that the rail industry is incompatible with simulator technology for training In particular the value and attitudes associated with training can explain much of the observed use and acceptance of simulator technology A tool called the Capital x Capital y CxCy culture map was developed to assist in describing and predicting technological compatibility This has applications across industrial settings **Urban**
