Systä, 2005-06-16 Visual notations and languages continue to play a pivotal role in the design of complex software systems In many cases visual notations are used to scribe usage or interaction scenarios of software systems or their components While representing scenarios using a visual notation is not the only possibility a vast majority of scenario description languages is visual Scenarios are used in telecommunications as Message Sequence Charts in object oriented system design as Sequence Diagrams in reverse engineering as execution traces and in requirements engineering as for example Use Case Maps or Life Sequence Charts These techniques are used to capture requirements to capture use cases in system documentation to specify test cases or to visualize runs of existing systems They are often employed to represent concurrent systems that interact via message passing or method invocation In telecommunications for more than 15 years the International Telecommunication Union has standardized the Message Sequence Charts MSCs notation in its recommendation Z 120 More recently with the emergence of UML as a predominant software design methodology there has been special interest in the development of the sequence diagram notation As a result the most recent version 2.0 of UML encompasses the Message Sequence Chart notation including its hierarchical modeling features Other scenario oriented diagrams in UML 2.0 include activity diagrams and timing diagrams Formal Methods and Software Engineering Chris George, Huaikou Miao, 2003-06-30 This book constitutes the refereed proceedings of the 4th International Conference on
