Model-Based Engineering of Embedded Real-Time Systems Holger Giese, Gabor Karsai, Edward A. Lee, Bernhard Rumpe, Bernhard Schätz, 2010-10-09 The topic of Model Based Engineering of Real Time Embedded Systems brings together a challenging problem domain real time embedded systems and a solution domain model based engineering It is also at the forefront of integrated software and systems engineering as software in this problem domain is an essential tool for system implementation and integration Today real time embedded software plays a crucial role in most advanced technical systems such as airplanes mobile phones and cars and has become the main driver and catalyst for innovation Development evolution verification configuration and maintenance of embedded and distributed software nowadays are often serious challenges as drastic increases in complexity can be observed in practice Model based engineering in general and model based software development in particular advocates the notion of using models throughout the development and life cycle of an engineered system Model based software engineering reinforces this notion by promoting models not only as the tool of abstraction but also as the tool for verification implementation testing and maintenance The application of such model based engineering techniques to embedded real time systems appears to be a good candidate to tackle some of the problems arising in the problem domain

Formal Techniques for Networked and Distributed Systems - FORTE 2002 Doron A. Peled, Moshe Y. Vardi, 2003-06-30 The IFIP TC6 WG 6.1 Joint International Conference on Formal Techniques for Networked and Distributed Systems FORTE 2002 was held this year at Rice University Houston Texas on November 11-14 This annual conference provides a forum for researchers and practitioners from universities and industry to meet and advance technologies in areas of specification testing and verification of distributed systems and communication protocols The main topics are FDT based system and protocol engineering Semantical foundations Extensions of FDTs Formal approaches to concurrent distributed object oriented systems Real time and probability aspects Performance modeling and analysis Quality of service modeling and analysis Verification and validation Relations between informal and formal specification FDT based protocol implementation Software tools and support environments FDT application to distributed systems Protocol testing including conformance testing interoperability testing and performance testing Test generation selection and coverage Practical experience and case studies Corporate strategic and financial consequences of using formal methods A total of 61 papers were submitted to FORTE 2002 and reviewed by members of the program committee and additional reviewers The program committee selected 22 regular papers two tool papers and two posters for presentation at the conference The program also

included three tutorials and we invited talks

Handbook of Software Engineering & Knowledge Engineering Shi Kuo Chang, 2002 This is the first handbook to cover comprehensively both software engineering and knowledge engineering two important fields that have become interwoven in recent years Over 60 international experts have contributed to the book Each chapter has been written in such a way that a practitioner of software engineering and knowledge engineering can easily understand and obtain useful information Each chapter covers one topic and can be read independently of other chapters providing both a general survey of the topic and an in depth exposition of the state of the art Practitioners will find this handbook useful when looking for solutions to practical problems Researchers can use it for quick access to the background current trends and most important references regarding a certain topic The handbook consists of two volumes Volume One covers the basic principles and applications of software engineering and knowledge engineering Volume Two will cover the basic principles and applications of visual and multimedia software engineering knowledge engineering data mining for software knowledge and emerging topics in software engineering and knowledge engineering

Progressions and Innovations in Model-Driven Software Engineering Díaz, Vicente García, 2013-06-30 Users increasingly demand more from their software than ever before more features fewer errors faster runtimes To deliver the best quality products possible software engineers are constantly in the process of employing novel tools in developing the latest software applications Progressions and Innovations in Model Driven Software Engineering investigates the most recent and relevant research on model driven engineering Within its pages researchers and professionals in the field of software development as well as academics and students of computer science will find an up to date discussion of scientific literature on the topic identifying opportunities and advantages and complexities and challenges inherent in the future of software engineering

Design Technology for Heterogeneous Embedded Systems Gabriela Nicolescu, Ian O'Connor, Christian Piguet, 2012-02-02 Design technology to address the new and vast problem of heterogeneous embedded systems design while remaining compatible with standard Moore flows i.e. capable of simultaneously handling both silicon complexity and system complexity represents one of the most important challenges facing the semiconductor industry today and will be for several years to come While the micro electronics industry over the years and with its spectacular and unique evolution has built its own specific design methods to focus mainly on the management of complexity through the establishment of abstraction levels the emergence of device heterogeneity requires new approaches enabling the satisfactory design of physically heterogeneous embedded systems for the widespread deployment of such systems Heterogeneous Embedded Systems compiled largely from a set of contributions from participants of past editions of the Winter School on Heterogeneous Embedded Systems Design Technology FETCH proposes a necessarily broad and holistic overview of design techniques used to tackle the various facets of heterogeneity in terms of technology and opportunities at the physical level signal representations and different abstraction levels architectures and components based on hardware and software in all

the main phases of design modeling validation with multiple models of computation synthesis and optimization It concentrates on the specific issues at the interfaces and is divided into two main parts The first part examines mainly theoretical issues and focuses on the modeling validation and design techniques themselves The second part illustrates the use of these methods in various design contexts at the forefront of new technology and architectural developments

Formal Methods for Industrial Critical Systems Falk Howar,Jiří Barnat,2018-08-29 This book constitutes the proceedings of the 23rd International Conference on Formal Methods for Industrial Critical Systems FMICS 2018 held in Maynooth Ireland in September 2018 The 9 regular papers presented in this volume were carefully reviewed and selected from 17 submissions The book also contains two invited talks in full paper length In addition there are 8 invited contributions in honor of Susanne Graf Director of Research at VERIMAG Grenoble France on the occasion of her 60th birthday The aim of the FMICS conference series is to provide a forum for researchers who are interested in the development and application of formal methods in industry In particular FMICS brings together scientists and engineers who are active in the area of formal methods and interested in exchanging their experiences in the industrial usage of these methods The FMICS conference series also strives to promote research and development for the improvement of formal methods and tools for industrial applications

Secure Systems Development with UML Jan Jürjens,2005-11-18 Attacks against computer systems can cause considerable economic or physical damage High quality development of security critical systems is difficult mainly because of the conflict between development costs and verifiable correctness J rjens presents the UML extension UMLsec for secure systems development It uses the standard UML extension mechanisms and can be employed to evaluate UML specifications for vulnerabilities using a formal semantics of a simplified fragment of UML Established rules of security engineering can be encapsulated and hence made available even to developers who are not specialists in security As one example J rjens uncovers a flaw in the Common Electronic Purse Specification and proposes and verifies a correction With a clear separation between the general description of his approach and its mathematical foundations the book is ideally suited both for researchers and graduate students in UML or formal methods and security and for advanced professionals writing critical applications

Advances in Modeling Agricultural Systems Petraq Papajorgji, Panos M. Pardalos, 2009-02-28 Agriculture has experienced a dramatic change during the past decades The change has been structural and technological Structural changes can be seen in the size of current farms not long ago agricultural production was organized around small farms whereas nowadays the agricultural landscape is dominated by large farms Large farms have better means of applying new technologies and therefore technological advances have been a driving force in changing the farming structure New technologies continue to emerge and their mastery and use requires that farmers gather more information and make more complex technological choices In particular the advent of the Internet has opened vast opportunities for communication and business opportunities within the agricultural community But at the same time it has created another class of complex issues that need to be addressed sooner rather than later Farmers and agricultural researchers are faced with an overwhelming amount of information they need to analyze and synthesize to successfully manage all the facets of agricultural production This daunting challenge requires new and complex approaches to farm management A new type of agricultural management system requires active cooperation among multidisciplinary and multi-institutional teams and refining of existing and creation of new analytical theories with potential use in agriculture Therefore new management agricultural systems must combine the newest achievements in many scientific domains such as agronomy economics mathematics and computer science to name a few

XIII Mediterranean Conference on Medical and Biological Engineering and Computing 2013 Laura M. Roa Romero, 2013-10-01 The general theme of MEDICON 2013 is Research and Development of Technology for Sustainable Healthcare This decade is being characterized by the appearance and use of emergent technologies under development This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concepts and practices The consequence will be a significant improvement in health care and well-being i.e. the shift from a reactive medicine to a preventive medicine This shift implies that the citizen will play an important role in the healthcare delivery process what requires a comprehensive and personalized assistance In this context society will meet emerging media incorporated to all objects capable of providing a seamless adaptive anticipatory unobtrusive and pervasive assistance The challenge will be to

remove current barriers related to the lack of knowledge required to produce new opportunities for all the society while new paradigms are created for this inclusive society to be socially and economically sustainable and respectful with the environment In this way these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications Mobile and Wireless Technologies 2017 Kuinam J. Kim,Nikolai Joukov,2017-06-14 This book gathers the proceedings of the 4th International Conference on Mobile and Wireless Technology ICMWT held in Kuala Lumpur Malaysia in June 2017 an event that provides researchers and practitioners from both academia and industry with a platform to keep them abreast of cutting edge developments in the field The peer reviewed and accepted papers presented here address topics in a number of major areas Mobile Wireless Networks and Applications Security in Mobile and Wireless Mobile Data Management and Applications Mobile Software Multimedia Communications Wireless Communications and Services Application and Business **Process Based Unification for Multi-model Software Process Improvement** Z.D. Kelemen,2013-01-30 Many different quality approaches are available in the software industry Some of the approaches such as ISO 9001 are not software specific i.e. they define general requirements for an organization and they can be used at any company Others such as Automotive SPICE have been derived from a software specific approach and can be used for improving specific in this case automotive processes Some are created to improve development processes e.g. CMMI for Development others focus on services e.g. CMMI for Services and again others are related to particular processes such as software testing e.g. TMMi or resource management e.g. People CMM A number of differences among quality approaches exist and there can be various situations in which the usage of multiple approaches is required e.g. to strengthen a particular process with multiple quality approaches or to reach certification of the compliance to a number of standards First of all it has to be decided which approaches have potential for the organization In many cases one approach does not contain enough information for process implementation Consequently the organization may need to use several approaches and the decision has to be made how the chosen approaches can be used simultaneously This area is called Multi model Software Process Improvement MSPI The simultaneous usage of multiple quality approaches is called the multi model problem In this dissertation we propose a solution for the multi model problem which we call the Process Based Unification PBU framework The PBU framework consists of the PBU concept a PBU process and the PBU result We call PBU concept the mapping of quality approaches to a unified process The PBU concept is operationalized by a PBU process The PBU result includes the resulting unified process and the mapping of quality approaches to the unified process Accordingly we addressed the following research question Does the PBU framework provide a solution The Semantic Web - ISWC 2006 Isabel Cruz,2006-10-26 This book constitutes the refereed proceedings of the 5th International Semantic Web Conference ISWC 2006 held in Athens GA USA in November 2006 It features more than 52 papers that address all current issues in the field of the semantic Web ranging from theoretical

aspects to various applied topics An additional 14 papers detail applications in government public health public service academic and industry
