Introduction

The MD-200ASX Desktop Microphone is designed for base station operation with the latest generation of Yaesu HF transmitters, including those with VFO A/B/C capability. Designed especially for ultra-low distortion and the highest fidelity, the MD-200ASX includes a new technology "Variable Gain Pressure Control" (VGPC), which allows precise adjustment of the microphone's audio response without resorting to "active" equalization circuits that can introduce distortion and/or degrade signal-to-noise ratio.

Servicing this equipment requires expertise in handling surface mount chip components. Attempts by unqualified persons to service this equipment may result in permanent damage not covered by warranty.

While we believe the technical information in this manual is correct, VERTEX STANDARD CO. assumes no liability for damage that may occur as a result of typographical or other errors that may be present. Your cooperation in pointing out any inaccuracies in the technical information would be appreciated.

VERTEX STANDARD CO. reserves the right to make changes in this transceiver and the alignment procedures, in the interest of technological improvement, without notification of owners.

Specifications
