Turning a Telephone Answering Service Into a Call Center Peter Lyle DeHaan, 2023-08-24 This book is a PhD dissertation and contains academic research It's made available primarily to aid other academics who are conducting their own industry research If this is what you seek here's an overview The telephone answering service industry is maturing and undergoing rapid changes In recent years the traditional client has been vanishing switching to alternative technologies bypassing their answering service Telephone answering services have reacted in various ways such as mergers and acquisitions pursuing niches or expanding their businesses scope The conventional wisdom is that there will always be a need for the human interaction which an answering service provides It further assumes that answering services will serve fewer clients and generate less revenue unless steps are taken to increase their reach or obtain non-traditional clients Previous research has recommended becoming a call center to better tap and capitalize on the needs of an emerging non-traditional client base The findings of this research effort determined there were

the essential elements which should be present for a telephone answering service to transition into a call center. Additionally, there were five items which are common industry dilemmas to be addressed. An inventory of significant call center characteristics was also developed. Most importantly, several areas of focus were advanced.

The second section examines Modelling, including a consideration of the challenges faced by public administration, a discussion of a framework for IT governance implementation suitable to improve alignment and communication between stakeholders of IT services, the design and implementation of IT architecture, and the adoption of enterprise architecture in public organizations. Finally, section three presents Case Studies, including IT governance in the context of e-government strategy implementation in the Caribbean, the relationship of IT organizational structure and IT governance performance in the IT department of a public research and education organization in a developing country, the relationship between organizational ambidexterity and IT governance through a study of the Swedish Tax Authorities, and the role of institutional logics in IT project activities and interactions in a large Swedish hospital.
