Godehardt,2013-03-09 The advent of the high speed computer with its enormous storage capabilities enabled statisticians as well as researchers from the different topics of life sciences to apply multivariate statistical procedures to large data sets to explore their structures More and more methods of graphical representation and data analysis are used for investigations These methods belong to a topic of growing popularity known as exploratory data analysis or EDA In many applications there is reason to believe that a set of objects can be clustered into subgroups that differ in meaningful ways Extensive data sets for example are stored in clinical cancer registers In large data sets like these nobody would expect the objects to be homogeneous The most commonly used terms for the class of procedures that seek to separate the component data into groups are cluster analysis or numerical taxonomy The origins of cluster analysis can be found in biology and anthropology at the beginning of the century The first systematic investigations in cluster analysis are those of K Pearson in 1894 The search for classifications or typologies of objects or persons however is indigenous not only to biology but to a wide variety of

disciplines Thus in recent years a growing interest in classification and related areas has taken place Today we see applications of cluster analysis not only to biology but also to such diverse areas as psychology regional analysis marketing research chemistry archaeology and medicine **Handbook of Social Network Analysis and Education** Nina Kolleck,2025-07-15 This prescient Handbook analyzes how Social Network Analysis SNA is revolutionizing educational research by transforming how we interpret the complex web of interactions between students teachers parents and education systems **Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges** Jonathan E. Suk,Kathleen M. Vogel,Amanda Jane Ozin,2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets These results suggested a worrisome possibility the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic In response a series of international discussions on the nature of dual use life science arose These discussions addressed the complex social technical political security and ethical issues related to dual use research This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives

Rey,2009-12-24 Spatial data analysis has seen explosive growth in recent years Both in mainstream statistics and econometrics as well as in many applied elds the attention to space location and interaction has become an important feature of scholarly work The methodsdevelopedto dealwith problemsofspatialpatternrecognition spatialau correlation and spatial

heterogeneity have seen greatly increased adoption in part due to the availability of user friendly desktop software Through his theoretical and applied work Arthur Getis has been a major contributing figure in this development In this volume we take both a retrospective and a prospective view of the field We use the occasion of the retirement and move to emeritus status of Arthur Getis to highlight the contributions of his work In addition we aim to place it into perspective in light of the current state of the art and future directions in spatial data analysis To this end we elected to combine reprints of selected classic contributions by Getis with chapters written by key spatial scientists These scholars were specifically invited to react to the earlier work by Getis with an eye toward assessing its impact tracing out the evolution of related research and to reflect on the future broadening of spatial analysis The organization of the book follows four main themes in Getis contributions Spatial analysis Pattern analysis Local statistics Applications For each of these themes the chapters provide a historical perspective on early methodological developments and theoretical insights assessments of these contributions in light of the current state of the art as well as descriptions of new techniques and applications
