Allocation Theory Applied to Farm Animal Production Wendy M. Rauw, 2009 This book is about resource allocation matters with the aim to further development thoughts and models on resource allocation applied to livestock production It contains 18 chapters divided into 4 parts which discuss resources and resource allocation patterns trade offs metabolic constraints to resource allocation and the process of homeorhesis with a special emphasis to homeorhesis during heat stress the relationship between food intake and resources allocated to body maintenance growth reproduction and the immune response the consequences of high production efficiency in pigs poultry and dairy cattle and the consequences of improved production by means of biological engineering and options to include resource allocation matters in the breeding objective animal welfare and in resource allocation modelling *Dead Epidemiologists* Rob Wallace, 2020-10-20 A history of COVID 19 and the sociopolitical crises that led to the 2020 global pandemic The COVID 19 pandemic shocked the world It shouldn't have Since this century's turn epidemiologists have warned of new infectious diseases Indeed H1N1 H7N9 SARS MERS Ebola Makona Zika and a variety of lesser viruses have emerged almost annually But what of the epidemiologists themselves Some bravely descended into the caves where bat species hosted coronaviruses including the strains that evolved into the COVID 19 virus Yet despite their own warnings many of the researchers appear unable to understand the true nature of the disease as if they are dead to what they've seen *Dead Epidemiologists* is an eclectic collection of commentaries articles and interviews revealing the hidden in plain sight truth behind the pandemic Global capital drove the deforestation and development that exposed us to new pathogens Rob Wallace and his colleagues ecologists geographers activists and yes epidemiologists unpack the material and conceptual origins of COVID 19 From deepest Yunnan to the boardrooms of New York City this book offers a compelling diagnosis of the roots of COVID 19 and a stark prognosis of what without further intervention may come Biotechnology Reda Sammour, 2012-03-14 This book deals with the importance of application of molecular biology as an approach of biotechnology for improvement of the quality of human life One of the interesting topics in this field is the identification of the organisms that produce bioactive secondary metabolites It also discusses how to structure a plan for use and preservation of those species that represent a potential source for new drug development especially those obtained from bacteria The book also introduces some novel applications of biotechnology such as therapeutic applications of electroporation improving quality and microbial safety of fresh cut vegetables producing synthetic

Big Farms

Make Big Flu Rob Wallace, 2016-06-30 The first collection to explore infectious disease agriculture economics and the nature of science together Thanks to breakthroughs in production and food science agribusiness has been able to devise new ways to grow more food and get it more places more quickly There is no shortage of news items on hundreds of thousands of hybrid poultry each animal genetically identical to the next packed together in megabarns grown out in a matter of months then slaughtered processed and shipped to the other side of the globe Less well known are the deadly pathogens mutating in and emerging out of these specialized agro environments In fact many of the most dangerous new diseases in humans can be traced back to such food systems among them Campylobacter Nipah virus Q fever hepatitis E and a variety of novel influenza

variants Agribusiness has known for decades that packing thousands of birds or livestock together results in a monoculture that selects for such disease But market economics doesn't punish the companies for growing Big Flu it punishes animals the environment consumers and contract farmers Alongside growing profits diseases are permitted to emerge evolve and spread with little check That is writes evolutionary biologist Rob Wallace it pays to produce a pathogen that could kill a billion people In *Big Farms Make Big Flu* a collection of dispatches by turns harrowing and thought provoking Wallace tracks the ways influenza and other pathogens emerge from an agriculture controlled by multinational corporations Wallace details with a precise and radical wit the latest in the science of agricultural epidemiology while at the same time juxtaposing ghastly phenomena such as attempts at producing featherless chickens microbial time travel and neoliberal Ebola Wallace also offers sensible alternatives to lethal agribusiness Some such as farming cooperatives integrated pathogen management and mixed crop livestock systems are already in practice off the agribusiness grid While many books cover facets of food or outbreaks Wallace's collection appears the first to explore infectious disease agriculture economics and the nature of science together *Big Farms Make Big Flu* integrates the political economies of disease and science to derive a new understanding of the evolution of infections Highly capitalized agriculture may be farming pathogens as much as chickens or corn
