Spaceports in Europe Annette Froehlich, 2022-01-01 This book explores how Europe is seeking to enlarge its launching capacities by building additional spaceports on the European continent Various national initiatives are envisaged resulting in a space race in the field of constructing spaceports and building micro launchers However right from the beginning when choosing the launch site land or sea based rocket launches there are various factors relating to international space law European regulations and national rules that must be considered as spaceports are rarely explicitly addressed in current legal and policy frameworks While launching sites used to be operated by governments private commercial initiatives are increasingly entering the field This paradigm shift must be reflected within regulations relating to various aspects of space liability by enlarging the long established terms of the United Nations space treaties to accommodate commercial space flights Questions of permission supervision and control require special liability regulations to avoid detrimental consequences stemming from the concept of launching states in view of the rise of private driven commercial space activities on a global level Furthermore not only do environmental aspects need to be thoroughly examined

but also the concept of critical infrastructure requires special attention from a security perspective to anticipate inter alia cyber attacks For these reasons several European and national regulations may need to be enlarged to apply to the entire space sector using a harmonized approach that has direct implications for the regulations programmes and missions of the European Union and the European Space Agency bearing in mind that the upcoming spaceports in Europe are an essential asset to substantially boost the European New Space *Aeronautical Knowledge* Facundo Conforti,2023-11-14
