Emerging Solutions for Future Manufacturing Systems Luis M. Camarinha-Matos, 2006-01-04 Industries and particularly the manufacturing sector have been facing difficult challenges in a context of socio economic turbulence characterized by complexity as well as the speed of change in causal interconnections in the socio economic environment In order to respond to these challenges companies are forced to seek new technological and organizational solutions In this context two main characteristics emerge as key properties of a modern automation system agility and distribution Agility because systems need not only to be flexible in order to adjust to a number of a priori defined scenarios but rather must cope with unpredictability Distribution in the sense that automation and business processes are becoming distributed and supported by collaborative networks Emerging Solutions for Future Manufacturing Systems includes the papers selected for

Applications in Coastal Modeling A.S. Trenhaile,V.C. Lakhan,1989-06-01 The importance of models to facilitate our understanding and management of the coastal system is evident from this book which shows that the preference for using models to study the coastal system is shared not only by different research institutions government military industry and academia but also by researchers from diverse backgrounds With contributions from several leading experts a variety of models physical analytical numerical and computer simulation are presented on various components of the coastal system The book opens by examining the coast as a system and provides an overview of models systems concepts and the systems approach It next covers the simulation design process stressing that modeling and simulation should form an interface between real world processes and the field of General Systems Theory It is clearly shown that a system can be investigated with more than one type of model For example it is shown that waves can be studied with physical models empirical and numerical models or with computer simulation models Likewise beaches can be investigated with physical numerical or empirically based models The indispensability of models to enhance our understanding of coastal dynamics and associated component systems is emphasised Mathematical modeling of rock coast development and the simulation of deltaic depositional systems are covered A chapter on analytical modeling of predator prey interactions highlights the fact that the coastal system also has biotic resources Finally problems which have to be overcome for the practical application of numerical and simulation models are discussed The explanatory and detailed formulation of the various models together with more than 100 figures make this book worthwhile reading for senior undergraduates graduate students and all coastal researchers interested in the formulation and application of models of the coastal system

Soft Computing in Industrial Applications Yukinori Suzuki,Seppo J. Ovaska,Takeshi Furuhashi,Rajkumar Roy,Yasuhiko Dote,2012-12-06 This book contains recent theoretical innovations and a comprehensive collection of industrial applications in the emerging field of Soft Computing Soft computing is a new form of artificial intelligence and it consists of four core methodologies Fuzzy Computing Neuro Computing Evolutionary Computation and Probabilistic Computing These individual techniques are clearly complementary or synergistic rather than competitive Therefore it is a common practice to combine two or three

methodologies when solving complex problems Also the systematic fusion of soft computing and hard computing is a highly potential alternative to be considered Soft computing methodologies are suitable for various real world applications because the available information and system knowledge are often imprecise un certain or partially even incorrect To handle such demanding conditions and obtain the required robustness with pure hard computing would typically be either very difficult or expensive This book is a unique collection of technical articles providing a thorough overview of the state of the art theory and industrial applications The core articles on evolutionary computation fuzzy computing and neuro computing are of particular interest to researchers and practicing engineers
