*Application of Stress-wave Theory to Piles* Frans B. J. Barends, 2022-06-03 Comprising 97 papers on Geotechnical Dynamic testing Equipment Performance during installation Driving equipment hammer pile soil system Reliability of predictions Theory versus experiment and simulation Each part starts with a lecture by invited keynote speakers followed by a general report on the papers New themes considered are environmental aspects related to vibration and noise the reliability of predictions emphasizing the validation of theoretical methods practical experience *Transonic Symposium: Theory, Application, and Experiment* ,1989 Hypersonic Technology for Military Application Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Air Force Studies Board, Committee on Hypersonic Technology for Military Application, 1990-02-01 **Field Programmable Logic and Applications** Patrick Lysaght, James Irvine, Reiner Hartenstein, 2004-06-22 This book contains the papers presented at the 9th International Workshop on Field Programmable Logic and Applications FPL 99 hosted by the University of Strathclyde in Glasgow Scotland August 30 September 1 1999 FPL 99 is the ninth in the series of annual FPL workshops The FPL 99 programme committee has been fortunate to have received a large number of high quality papers addressing a wide range of topics From these 33 papers have been selected for presentation at the workshop and a further 32 papers have been accepted for the poster sessions A total of 65 papers from 20 countries are included in this volume FPL is a subject area that attracts researchers from both electronic engineering and computer science Whether we are engaged in research into software or hard software seems to be primarily a question of perspective What is unquestionable is that the interaction of groups of researchers from different backgrounds results in stimulating and productive research As we prepare for the new millennium the premier European forum for researchers in field programmable logic remains the FPL workshop Next year the FPL series of workshops will celebrate its tenth anniversary The contribution of so many overseas researchers has been a particularly attractive feature of these events giving them a truly international perspective while the informal and convivial atmosphere that pervades the workshops have been their hallmark We look forward to preserving these features in the future while continuing to expand the size and quality of the events Intelligent Robotics and Applications Honghai Liu, Han Ding, Zhenhua Xiong, Xiangyang Zhu, 2010-10-27 The market demand for skills knowledge and adaptability have positioned robotics to be an important field in both engineering and science One of the most highly visible applications of robotics has been the robotic automation of many industrial tasks in factories In the future a new era will come in which we will see a greater success for robotics in non industrial environments In order to anticipate a wider deployment of intelligent and autonomous robots for tasks such as manufacturing healthcare entertainment search and rescue surveillance exploration and security missions it is essential to push the frontier of robotics into a new dimension one in which motion and intelligence play equally important roles The 2010 International Conference on Intelligent Robotics and Applications ICIRA 2010 was held in Shanghai China November

10 12 2010 The theme of the conference was Robotics Harmonizing Life a theme that reflects the ever growing interest in research development and applications in the dynamic and exciting areas of intelligent robotics These volumes of Springer s Lecture Notes in Artificial Intelligence and Lecture Notes in Computer Science contain 140 high quality papers which were selected at least for the papers in general sessions with a 62% acceptance rate Traditionally ICIRA 2010 holds a series of plenary talks and we were fortunate to have two such keynote speakers who shared their expertise with us in diverse topic areas spanning the range of intelligent robotics and application activities Field-Programmable Logic and Applications Manfred Glesner, Peter Zipf, Michel Renovell, 2002-08-21 This book constitutes the refereed proceedings of the 12th International Conference on Field Programmable Logic and Applications FPL 2002 held in Montpellier France in September 2002 The 104 revised regular papers and 27 poster papers presented together with three invited contributions were carefully reviewed and selected from 214 submissions The papers are organized in topical sections on rapid prototyping FPGA synthesis custom computing engines DSP applications reconfigurable fabrics dynamic reconfiguration routing and placement power estimation synthesis issues communication applications new technologies reconfigurable architectures multimedia applications FPGA based arithmetic reconfigurable processors testing and fault tolerance crypto applications multitasking compilation techniques etc Energy Research Abstracts ,1993 **Tranasonic Symposium: Theory, Application, and Experiment, Volume 1, Part 1** ,1989 **The Application of Stress-wave Theory to Piles** Jaime Alberto dos Santos, 2008 This volume contains 101 papers presented at the 8th International Conference on the Application of Stress Wave Theory to Piles held in Lisbon Portugal in 2008 It is divided in 14 chapters according to the conference themes Wave mechanics applied to pile engineering Relationship between static resistance to driving and long term static soil resistance Case histories involving measurement and analysis of stress waves Dynamic monitoring of driven piles Dynamic soil pile interaction models numerical and physical modeling High strain dynamic test Low strain dynamic test Rapid load test Monitoring and analysis of vibratory driven piles Correlation of dynamic and static load tests Quality assurance of deep foundations using dynamic methods Incorporation of dynamic testing into design codes and testing standards Ground vibrations induced by pile motions Dynamic measurements in ground field testing This conference aims to contribute to a better and more efficient professional interaction between specialized contractors designers and academicians By joining the contribution of all of them it was possible to elucidate the today s state of the art in science technology and practice in the application of stress wave theory to piles BOOK JACKET **Applied Mechanics Reviews** ,1974 **Application of Stress-Wave Theory to Piles: Quality Assurance on Land and Offshore Piling** J. Beim, S. Niyama, 2000-01-01 This work collates the topics discussed in the sixth International Conference on land and offshore piling It covers topics such as wave mechanics and its application to pile mechanics driving equipment and developments and pile integrity and low strain dynamic testing **Scientific and Technical Aerospace Reports** ,1994 **Energy Abstracts for Policy Analysis** ,1986 **Aeronautical Engineering**

,1971 A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports STAR and International aerospace abstracts IAA Slender-body Theory Based on Approximate Solution of the Transonic Flow Equation John R. Spreiter,Alberta Y. Alksne,1959 Summary Approximate solutions of the nonlinear equations of the small disturbance theory of transonic flow are found for the pressure distribution on pointed slender bodies of revolution for flows with free stream Mach number 1 and for flows that are either purely subsonic or purely supersonic These results are obtained by application of a method based on local linearization that was introduced recently in the analysis of similar problems in low dimensional flows The theory is developed for bodies of arbitrary shapes and specific results are given for cone cylinders and for parabolic arc bodies at zero angle of attack All results are compared either with existing theoretical results or with experimental data **Principles and Applications of Well Logging** Hongqi Liu,2017-06-15 This book primarily focuses on the principles and applications of electric logging sonic logging nuclear logging production logging and NMR logging especially LWD tools Sondex production logging tools and other advanced image logging techniques such as ECLIPS 5700 EXCELL 2000 etc that have been developed and used in the last two decades Moreover it examines the fundamentals of rock mechanics which contribute to applications concerning the stability of borehole sidewall safety density window of drilling fluid fracturing etc As such the book offers a valuable resource for a wide range of readers including students majoring in petrophysics geophysics geology and seismology and engineers working in well logging and exploitation

**A Collection of Technical Papers** ,1972 **Proceedings of the International Field Exploration and Development Conference 2023** Jia'en Lin,2024-03-11 This book focuses on reservoir surveillance and management reservoir evaluation and dynamic description reservoir production stimulation and EOR ultra tight reservoir unconventional oil and gas resources technology oil and gas well production testing and geomechanics This book is a compilation of selected papers from the 13th International Field Exploration and Development Conference IFEDC 2023 The conference not only provides a platform to exchanges experience but also promotes the development of scientific research in oil gas exploration and production The main audience for the work includes reservoir engineer geological engineer enterprise managers senior engineers as well as students **Computation of Viscous Shock/shock Hypersonic Interactions with an Implicit Flux Split Scheme** Datta V. Gaitonde,1990 The interaction of an impinging shock with the bow shock generated by a blunt geometry is examined numerically for hypersonic Mach 8 perfect gas flows with modified Steger Warming flux split scheme The modifications are designed to reduce numerical dissipation in the boundary layer thus improving the resolution and accuracy of the resulting algorithm The full 2 D Navier Stokes equations are solved in finite volume formulation with central differencing for viscous terms and residual driven line Gauss Seidel relaxation for time advancement Grid resolution studies are performed For a Type IV interaction comparison with surface pressure and heat transfer rates display good overall

agreement with experimental values For a Type III interaction a detailed comparison is made with experimental surface quantities and a computation with Van Leer's flux splitting algorithm The peak amplification of pressure is modestly overpredicted with the current algorithm The computed peak heat transfer is comparable to that obtained in previous research with Van Leer's splitting although anomalous behavior is observed in the vicinity of the stagnation point This behavior may be eliminated with appropriate corrections
