**Integrated Circuit Design. Power and Timing Modeling, Optimization and Simulation** Bertrand Hochet, Antonio J. Acosta, Manuel J. Bellido, 2003-08-02 The International Workshop on Power and Timing Modeling Optimization and Simulation PATMOS 2002 was the 12th in a series of international workshops 1 previously held in several places in Europe PATMOS has over the years evolved into a well established and outstanding series of open European events on power and timing aspects of integrated circuit design The increased interest especially in low power design has added further momentum to the interest in this workshop Despite its growth the workshop can still be considered as a very cused conference featuring high level scientific presentations together with open discussions in a free and easy environment This year the workshop has been opened to both regular papers and poster presentations The increasing number of worldwide high quality submissions is a measure of the global interest of the international scientific community in the topics covered by PATMOS The objective of this workshop is to provide a forum to discuss and investigate the emerging problems in the design methodologies and CAD tools for the new generation of IC technologies A major emphasis of the technical program is on speed and low power aspects with particular regard to modeling characterization design and architectures The technical program of PATMOS 2002 included nine sessions dedicated to most important and current topics on power and timing modeling optimization and simulation The three invited talks try to give a global overview of the issues in low power and or high performance circuit design

**Resources in Education** , 1997 *Through-the-Wall Radar Imaging* Moeness G. Amin, 2017-12-19 Through the wall radar imaging TWRI allows police fire and rescue personnel first responders and defense forces to detect identify classify and track the whereabouts of humans and moving objects Electromagnetic waves are considered the most effective at achieving this objective yet advances in this multi faceted and multi disciplinary technology require taking phenomenological issues into consideration and must be based on a solid understanding of the intricacies of EM wave interactions with interior and exterior objects and structures Providing a broad overview of the myriad factors involved namely size weight mobility acquisition time aperture distribution power bandwidth standoff distance and most importantly reliable performance and

delivery of accurate information Through the Wall Radar Imaging examines this technology from the algorithmic modeling experimentation and system design perspectives It begins with coverage of the electromagnetic properties of walls and building materials and discusses techniques in the design of antenna elements and array configurations beamforming concepts and issues and the use of antenna array with colocated and distributed apertures Detailed chapters discuss several suitable waveforms inverse scattering approaches and revolve around the relevance of physical based model approaches in TWRI along with theoretical and experimental research in 3D building tomography using microwave remote sensing high frequency asymptotic modeling methods synthetic aperture radar SAR techniques impulse radars airborne radar imaging of multi floor buildings strategies for target detection and detection of concealed targets The book concludes with a discussion of how the Doppler principle can be used to measure motion at a very fine level of detail The book provides a deep understanding of the challenges of TWRI stressing its multidisciplinary and phenomenological nature The breadth and depth of topics covered presents a highly detailed treatment of this potentially life saving technology *Federal Register* ,2014
