Moon, 2014-05-04 Discoveries of chaotic unpredictable behaviour in physical deterministic systems has brought about new analytic and experimental techniques in dynamics The modern study of the new phenomena requires the analyst to become familiar with experiments at least with numerical ones since chaotic solutions cannot be written down and it requires the experimenter to master the new concepts of the theory of nonlinear dynamical systems This book is unique in that it presents both viewpoints the viewpoint of the analyst and of the experimenter In the first part F Moon outlines the new experimental techniques which have emerged from the study of chaotic vibrations These include Poincar sections fractal dimensions and Lapunov exponents In the text by W Szemplinska Stupnicka the relation between the new chaotic phenomena and classical perturbation techniques is explored for the first time In the third part G Iooss presents methods of analysis for the calculations of bifurcations in nonlinear systems based on modern geometric mathematical concepts

 Bögl, 2010-03-10 In many decision problems (e.g. from the area of production and logistics management) the evaluation of alternatives and the determination of an optimal or at least suboptimal solution is an important but difficult task. For most such problems no efficient algorithm is known and classical approaches of Operations Research like Mixed Integer Linear Programming or Dynamic Programming are often of limited use due to excessive computation time. Therefore dedicated heuristic solution approaches have been developed which aim at providing good solutions in reasonable time for a given problem. However, such methods have two major drawbacks. First, they are tailored to a specific problem and their adaptation to other problems is difficult and in many cases even impossible. Second, they are typically designed to build one single solution in the most effective way, whereas most decision problems have a vast number of feasible solutions. Hence, usually the chances are high that there exist better ones. To overcome these limitations, problem-independent search strategies, in particular metaheuristics, have been proposed. This book provides an elementary step-by-step introduction to metaheuristics, focusing on the search concepts they are based on. The first part demonstrates underlying concepts of search strategies using a simple example optimization problem.
