

Carla volunteered to make pies for a bake sale. She bought two pounds of apples and six pounds of peaches and spent \$19. After baking the pies she decided they looked so good she would make more. She went back to the store and bought another pound of apples and five more pounds of peaches and spent \$15. Her purchases can be represented by the following system of equations where  $a$  represents the cost per pound of the apples and  $p$  represents the cost per pound of the peaches.

$$2a + 6p = 19$$

$$a + 5p = 15$$

Solve the system either algebraically or by graphing and explain why you chose that method. (Note: The solution will contain fractions.)

$$\begin{array}{r} 2a + 6p = 19 \\ (-2) a + 5p = 15 \end{array}$$

$$\begin{array}{r} 2a + 6p = 19 \\ -2a - 5p = -30 \end{array}$$
$$p = -11$$

$$\begin{array}{r} a + 5p = 15 \\ a + 5(-11) = 15 \\ a - 55 = 15 \\ a = 70 \end{array}$$

*Using Understanding by Design in the Culturally and Linguistically Diverse Classroom* Amy J. Heineke,Jay McTighe,2018-07-11 How can today s teachers whose classrooms are more culturally and linguistically diverse than ever before ensure that their students achieve at high levels How can they design units and lessons that support English learners in language development

and content learning simultaneously Authors Amy Heineke and Jay McTighe provide the answers by adding a lens on language to the widely used Understanding by Design framework UbD framework for curriculum design which emphasizes teaching for understanding not rote memorization Readers will learn the components of the UbD framework the fundamentals of language and language development how to use diversity as a valuable resource for instruction by gathering information about students background knowledge from home community and school how to design units and lessons that integrate language development with content learning in the form of essential knowledge and skills and how to assess in ways that enable language learners to reveal their academic knowledge Student profiles real life classroom scenarios and sample units and lessons provide compelling examples of how teachers in all grade levels and content areas use the UbD framework in their culturally and linguistically diverse classrooms Combining these practical examples with findings from an extensive research base the authors deliver a useful and authoritative guide for reaching the overarching goal ensuring that all students have equitable access to high quality curriculum and instruction

**Numerical Algebra, Matrix Theory, Differential-Algebraic Equations and Control Theory** Peter Benner, Matthias Bollhöfer, Daniel Kressner, Christian Mehl, Tatjana Stykel, 2015-05-09 This edited volume highlights the scientific contributions of Volker Mehrmann a leading expert in the area of numerical linear algebra matrix theory differential algebraic equations and control theory These mathematical research areas are strongly related and often occur in the same real world applications The main areas where such applications emerge are computational engineering and sciences but increasingly also social sciences and economics This book also reflects some of Volker Mehrmann's major career stages Starting out working in the areas of numerical linear algebra his first full professorship at TU Chemnitz was in Numerical Algebra hence the title of the book and matrix theory Volker Mehrmann has made significant contributions to these areas ever since The highlights of these are discussed in Parts I and II of the present book Often the development of new algorithms in numerical

linear algebra is motivated by problems in system and control theory These and his later major work on differential algebraic equations to which he together with Peter Kunkel made many groundbreaking contributions are the topic of the chapters in Part III Besides providing a scientific discussion of Volker Mehrmann's work and its impact on the development of several areas of applied mathematics the individual chapters stand on their own as reference works for selected topics in the fields of numerical linear algebra matrix theory differential algebraic equations and control theory

**Control of Distributed Parameter and Stochastic Systems** Shuping Chen, Xunjing Li, Jiongming Yong, Xun Yu Zhou, 1999-03-31 In the mathematical treatment of many problems which arise in physics economics engineering management etc the researcher frequently faces two major difficulties infinite dimensionality and randomness of the evolution process Infinite dimensionality occurs when the evolution in time of a process is accompanied by a space like dependence for example spatial distribution of the temperature for a heat conductor spatial dependence of the time varying displacement of a membrane subject to external forces etc Randomness is intrinsic to the mathematical formulation of many phenomena such as fluctuation in the stock market or noise in communication networks Control theory of distributed parameter systems and stochastic systems focuses on physical phenomena which are governed by partial differential equations delay differential equations integral differential equations etc and stochastic differential equations of various types This has been a fertile field of research with over 40 years of history which continues to be very active under the thrust of new emerging applications Among the subjects covered are Control of distributed parameter systems Stochastic control Applications in finance insurance manufacturing Adapted control Numerical approximation It is essential reading for applied mathematicians control theorists economic financial analysts and engineers
