Solutions Operations Chain Management 13th Edition:

Sustainable Operations and Supply Chain Management Melanie E. Kreye, 2023-01-31 This book takes as its starting point the need to improve sustainability performance across the triple bottom line and reach global sustainable development goals. As such, it places sustainability at the heart of developing and explaining relevant theory, concepts, and models in operations and supply chain management. Whereas previous textbooks on operations and supply chain management have focused on augmenting existing models of operations and supply chain management by simply adding on selected sustainability issues, this textbook places sustainability at the heart of operations and supply chain management. **Sustainable Operations and Supply Chain Management** consolidates the tools, concepts, and methods of operations and supply chain management relevant for reaching sustainable development goals. This book includes not only descriptions of the theories and models but also practical cases based on the most recent developments in different industry sectors, including user electronics, healthcare, fashion, and energy. Relevant student exercises are also included for use in the classroom or in personal study. This book provides an ideal introduction for Bachelor or Masters level students, whether they are on general management and business degrees or are focused on areas such as engineering, management, technology, management, or sustainability management. Furthermore, university level teachers and lecturers will find the material presented in this book a valuable basis for structuring their courses on operations and supply chain management in the context of sustainability.

Handbook of Newsvendor Problems Tsan-Ming Choi, 2012-06-09 As a fundamental problem in stochastic inventory control, the newsvendor problem has been studied since the 18th century in the economic literature and has been widely used to analyze supply chains in fashion and seasonal product industries. Since the 1950s, the newsvendor problem has been extensively studied in operations research and extended to model a variety of real life problems. The simplest and most elementary version of the newsvendor problem is an optimal stocking problem in which a newsvendor needs to decide how many newspapers to order for future demand where the future demand is uncertain and follows a stationary distribution. Research in this area has greatly increased over the last few years, and now the **Handbook of Newsvendor Problems: Models, Extensions, and Applications** captures the state of the art. The handbook consists of two sections: Models and Extensions and Applications. Each section includes many interesting works in the respective domain. Section I presents papers on topics like the multi-product newsvendor problems, the newsvendor problem with law-invariant coherent measures of risk, a Copula approach to inventory pooling problems with newsvendor products, repeated newsvendor games with transshipments, cooperative newsvendor games, an economic interpretation for the price setting newsvendor problem, newsvendor models with alternative risk preferences within expected utility theory and prospect theory frameworks, and newsvendor problems with VaR and CVaR consideration. Section II presents papers on such topics as a two-period newsvendor problem for closed-loop supply chain analysis, the remanufacturing newsvendor problem, inventory centralization in a newsvendor setting when

shortage costs differ production planning on an unreliable machine for multiple items analysis of the newsvendor problem under carbon emissions policies optimal decisions of the manufacturer and distributor in a fresh product supply chain involving long distance transportation a newsvendor perspective on profit target setting for multiple divisions and a portfolio approach to multi product newsvendor problem with budget constraint This well balanced handbook presents a wealth of theoretical results from different perspectives With contributions from many of the leading researchers in the field the Handbook of Newsvendor Problems Models Extensions and Applications is a timely addition to the literature and consolidates all the new and exciting works related to the newsvendor problem into one high quality source The Science of Service Systems Haluk Demirkan,James C.
