Solutions The Fundamentals Of Modern Statistical Genetics:

The Fundamentals of Modern Statistical Genetics Nan M. Laird, Christoph Lange, 2010-12-13 This book covers the statistical models and methods that are used to understand human genetics following the historical and recent developments of human genetics Starting with Mendel's first experiments to genome wide association studies the book describes how genetic information can be incorporated into statistical models to discover disease genes All commonly used approaches in statistical genetics e.g. aggregation analysis segregation linkage analysis etc are used but the focus of the book is modern approaches to association analysis Numerous examples illustrate key points throughout the text both of Mendelian and complex genetic disorders The intended audience is statisticians biostatisticians epidemiologists and quantitatively oriented geneticists and health scientists wanting to learn about statistical methods for genetic analysis whether to better analyze genetic data or to pursue research in methodology A background in intermediate level statistical methods is required The authors include few mathematical derivations and the exercises provide problems for students with a broad range of skill levels No background in genetics is assumed Catalog of Copyright Entries. Social Contact Data Niel Hens,Ziv Shkedy,Marc Aerts,Christel Faes,Pierre Van Damme,Philippe Beutels,2012-10-24 Mathematical epidemiology of infectious diseases usually involves describing the flow of individuals between mutually exclusive infection states One of the key parameters describing the transition from the susceptible to the infected class is the hazard of infection often referred to as the force of infection The force of infection reflects the degree of contact with potential for transmission between infected and susceptible individuals The mathematical relation between the force of infection and effective contact patterns is generally assumed to be subjected to the mass action principle which yields the necessary information to estimate the basic reproduction number another key parameter in infectious disease epidemiology It is within this context that the Center for Statistics CenStat I Biostat Hasselt University and the Centre for the Evaluation of Vaccination and the Centre for Health Economic Research and Modelling Infectious Diseases CEV CHERMID Vaccine and Infectious Disease Institute University of Antwerp have collaborated over the past 15 years This book demonstrates the past and current research activities of these institutes and can be considered to be a milestone in this collaboration This book is focused on the application of modern statistical methods and models to estimate infectious disease parameters We want to provide the readers with software guidance such as R packages and with data as far as they can be made publicly available
