Images of Mathematics Viewed Through Number, Algebra, and Geometry Robert G. Bill,2014-07-31 Mathematics is often seen only as a tool for science engineering and other quantitative disciplines Lost in the focus on the tools are the intricate interconnecting patterns of logic and ingenious methods of representation discovered over millennia which form the broader themes of the subject This book building from the basics of numbers algebra and geometry provides sufficient background to make these themes accessible to those not specializing in mathematics The various topics are also covered within the historical context of their development and include such great innovators as Euclid Descartes Newton Cauchy Gauss

Lobachevsky Riemann Cantor and G del whose contributions would shape the directions that mathematics would take The detailed explanations of all subject matter along with extensive references are provided with the goal of allowing readers an entrance to a lifetime of the unique pleasures of mathematics Topics include the axiomatic development of number systems and their algebraic rules the role of infinity in the real and transfinite numbers logic and the axiomatic path from traditional to non Euclidean geometries The themes of algebra and geometry are then brought together through the concepts of analytic geometry and functions With this background more advanced topics are introduced sequences vectors tensors matrices calculus set theory and topology Drawing the common themes of this book together the final chapter discusses the struggle over the meaning of mathematics in the twentieth century and provides a meditation on its success *Mastering First*

Sayers,2005-01-17 Dorothy L Sayers great lay contemporaries in the Church of England were T S Eliot C S Lewis and Charles Williams but none of them wrote a book quite like *The Mind of the Maker* In this crisp elegant exercise in theology Sayers illuminates the doctrine of the Trinity by relating it to the process of writing fiction a process about which she could speak with complete authority She illustrates her thesis with many examples drawn from her own books and even illuminates the Christian heresies by analysing certain failures of creation which regularly occur in literature This marvellous classic describes the creative process in terms of the arts and shows that literature can cast light on theology and vice versa **Get Ready for 1st Grade Math** Sylvan
