Creutzfeldt, J. Köbberling, J.V. terms of scientific laws If this were so we would have to regard the speculations of Plato Aristotle Augustine Montaigne Shakespeare and Rousseau as worthless Goodheart exposes the philistinism of literary Darwinism the bad faith and inverted fundamentalism of the Darwinian approach to religion and the dangers of the effort to create a Darwinian ethical system Taken together Goodheart's arguments show that in moving beyond their area of competence the neo Darwinists commit an ideology not a science

Genetics in Medicine

James Scott Thompson, Margaret Wilson Thompson, 1966 Natural Selection Richard G. Delisle, 2021-02-27 This book contests the general view that natural selection constitutes the explanatory core of evolutionary biology. It invites the reader to consider an alternative view which favors a more complete and multidimensional interpretation. It is common to present the 1930-1960 period as characterized by the rise of the Modern Synthesis, an event structured around two main explanatory commitments: 1. Gradual evolution is explained by small genetic changes, variations oriented by natural selection, a process leading to adaptation. 2. Evolutionary trends and speciation events are macroevolutionary phenomena that can be accounted for solely in terms of the extension of processes and mechanisms occurring at the previous microevolutionary level. On this view, natural selection holds a central explanatory role in evolutionary theory, one that presumably reaches back to Charles Darwin's *Origin of Species*, a view also accompanied by the belief that the field of evolutionary biology is organized around a profound divide: theories relying on strong selective factors and those appealing only to weak ones. If one reads the new analyses presented in this volume by biologists, historians, and philosophers, this divide seems to be collapsing at a rapid pace, opening an era dedicated to the search for a new paradigm for the development of evolutionary biology. Contrary to popular belief, scholars' position on natural selection is not in itself a significant discriminatory factor between most evolutionists. In fact, the intellectual space is quite limited, if not nonexistent, between on the one hand Darwinists who play down the central role of natural selection in evolutionary explanations and on the other hand non-Darwinists who use it in a list of other evolutionary mechanisms. The mechanism-centered approach to evolutionary biology is too incomplete to fully make sense of its development. In this book, the labels created under the traditional historiography—Darwinian Revolution, Eclipse of Darwinism, Modern Synthesis, Post-Synthetic Developments—are thus re-evaluated. This book will not only appeal to researchers working in evolutionary biology but also to historians and philosophers.

Evolutionary Social Psychology Jeffery A. Simpson, Douglas T. Kenrick, 2014-02-25 What a pity it would have been if biologists had refused to accept Darwin's theory of natural selection, which has been essential in helping biologists understand a wide range of phenomena in many animal species. These days, to study any animal species while refusing to consider the evolved adaptive significance of their behavior would be considered pure folly, unless of course the species is *homo sapiens*. Graduate students training to study this particular primate species may never take a single course in

evolutionary theory although they may take two undergraduate and up to four graduate courses in statistics These methodologically sophisticated students then embark on a career studying human aggression cooperation mating behavior family relationships or altruism with little or no understanding of the general evolutionary forces and principles that shaped the behaviors they are investigating This book hopes to redress that wrong It is one of the first to apply evolutionary theories to mainstream problems in personality and social psychology that are relevant to a wide range of important social phenomena many of which have been shaped and molded by natural selection during the course of human evolution These phenomena include selective biases that people have concerning how and why a variety of activities occur For example information exchanged during social encounters is initially perceived and interpreted people are romantically attracted to some potential mates but not others people often guard protect and work hard at maintaining their closest relationships people form shifting and highly complicated coalitions with kin and close friends and people terminate close long standing relationships Evolutionary Social Psychology begins to disentangle the complex interwoven patterns of interaction that define our social lives and relationships Tempo and Mode in Evolution for the National Academy of Sciences,1995-02-09 Since George Gaylord Simpson published *Tempo and Mode in Evolution* in 1944 discoveries in paleontology and genetics have abounded This volume brings together the findings and insights of today s leading experts in the study of evolution including Ayala W Ford Doolittle and Stephen Jay Gould The volume examines early cellular evolution explores changes in the tempo of evolution between the Precambrian and Phanerozoic periods and reconstructs the Cambrian evolutionary burst Long neglected despite Darwin s interest in it species extinction is discussed in detail Although the absence of data kept Simpson from exploring human evolution in his book the current volume covers morphological and genetic changes in human populations contradicting the popular claim that all modern humans descend from a single woman This book discusses the role of molecular clocks the results of evolution in 12 populations of *Escherichia coli* propagated for 10 000 generations a physical map of *Drosophila* chromosomes and evidence for hitchhiking by mutations **Report of the Meeting ANZAAS (Association),1951** *Technical Report* Cold Regions Research and Engineering Laboratory (U.S.),1951 **The Handbook of Genetics & Society** Paul Atkinson,Peter Glasner,Margaret Lock,2009-07-02 An authoritative Handbook which offers a discussion of the social political ethical and economic consequences and implications of the new bio sciences The Handbook takes an interdisciplinary approach providing a synoptic overview of contemporary international social science research on genetics genomics and the new life sciences It brings together leading scholars with expertise across a wide ranging spectrum of research fields related to the production use commercialisation and regulation of genetics knowledge The Handbook is structured into seven cross cutting themes in contemporary social science research on genetics with introductions written by internationally renowned section editors who take an interdisciplinary approach to offer fresh insights on recent developments and issues in often controversial fields of study The Handbook explores local and global

issues and critically approaches a wide range of public and policy questions providing an invaluable reference source to a wide variety of researchers academics and policy makers The Species Problem Richard A. Richards, 2010-07-01 There is long standing disagreement among systematists about how to divide biodiversity into species Over twenty different species concepts are used to group organisms according to criteria as diverse as morphological or molecular similarity interbreeding and genealogical relationships This combined with the implications of evolutionary biology raises the worry that either there is no single kind of species or that species are not real This book surveys the history of thinking about species from Aristotle to modern systematics in order to understand the origin of the problem and advocates a solution based on the idea of the division of conceptual labor whereby species concepts function in different ways theoretically and operationally It also considers related topics such as individuality and the metaphysics of evolution and how scientific terms get their meaning This important addition to the current debate will be essential for philosophers and historians of science and for biologists
