Stahl,2012-04-18 The present text was probably at least 35 years in the making preparation The astronomy and astrophysics content and problems appearing were collected from a number of basic and advanced astronomy and astrophysics courses and technical workshops at the Harry Bayley Observatory in Barbados from 1977 1989 Other content emerged from an extended series of articles written under the banner of

Mathematics in Astronomy for The Journal of the Barbados Astronomical Society over 1977-1990 The content is of varying difficulty and ranges from simple astronomy problems to do with sidereal time stellar magnitudes and Kepler's planetary laws to spherical astronomy including using matrices for coordinate transformations and stellar evolution structure solar physics and galactic dynamics It will be no surprise that some topics and their related problems will be fairly easy to master while others e.g. Solar MHD galactic structure special relativity will be much more difficult Still I hope more adventurous readers will at least attempt the problems in the latter chapters An optics supplement is also included as well as a primer on differential equations which are really the skeleton key to doing any advanced physics astrophysics
