P5-1. Using a time line

LG 1; Basic

a, b, and c

d. Financial managers rely more on present value than future value because they typically make decisions before the start of a project, at time zero, as does the present value calculation.

P5-2. Future value calculation

LG 2; Basic

Case

A $N = 2, I = 12\%, PV = \$1$, Solve for $FV = 1.2544$

B $N = 3, I = 6\%, PV = \$1$, Solve for $FV = 1.1910$

C $N = 2, I = 9\%, PV = \$1$, Solve for $FV = 1.1881$

D $N = 4, I = 3\%, PV = \$1$, Solve for $FV = 1.1259$

P5-3. Time to double

LG 1; Basic

Case A: Computer Inputs: $I = 12\%, PV = \$100, FV = \200
Solve for $N = 6.12$ years

Case B: Computer Inputs: $I = 6\%, PV = \$100, FV = \200
→ $N = 11.90$ years

It takes just short of twice as long to double in value. One reason for it being shorter is that in Case B there are more periods over which compounding occurs.

Separable Optimization Stefan M. Stefanov, 2022-01-01 In this book the theory methods and applications of separable optimization are considered. Some general results are presented. Techniques of approximating the separable problem by linear programming problem and dynamic programming are also studied. Convex separable programs subject to inequality equality constraint s and bounds on variables are also studied and convergent iterative algorithms of polynomial complexity are proposed. As an application these algorithms are used in the implementation of stochastic quasigradient methods to some separable stochastic programs. The problems of numerical approximation of tabulated functions and numerical solution of overdetermined systems of linear algebraic equations and some systems of nonlinear equations are solved by separable convex unconstrained minimization problems. Some properties of the Knapsack polytope are also studied. This second edition includes a substantial amount of new and revised content. Three new chapters 15 17 are included. Chapters 15 16 are devoted to the further analysis of the Knapsack problem. Chapter 17 is focused on the analysis of a nonlinear transportation problem. Three new Appendices E G are also added to this edition and present technical details that help round out the coverage.

Optimization problems and methods for solving the problems considered are interesting not only from the viewpoint of optimization theory optimization methods and their applications but also from the viewpoint of other fields of science especially the artificial intelligence and machine learning fields within computer science This book is intended for the researcher practitioner or engineer who is interested in the detailed treatment of separable programming and wants to take advantage of the latest theoretical and algorithmic results It may also be used as a textbook for a special topics course or as a supplementary textbook for graduate courses on nonlinear and convex optimization

Partial Differential Equations F. John, 2012-12-06 The book has been completely rewritten for this new edition While most of the material found in the earlier editions has been retained though in changed form there are considerable additions in which extensive use is made of Fourier transform techniques Hilbert space and finite difference methods A condensed version of the present work was presented in a series of lectures as part of the Tata Institute of Fundamental Research Indian Institute of Science Mathematics Programme in Bangalore in 1977 I am indebted to Professor K G Ramanathan for the opportunity to participate in this exciting educational venture and to Professor K Balagangadharan for his ever ready help and advice and many stimulating discussions Very special thanks are due to N Sivaramakrishnan and R Mythili who ably and cheerfully prepared notes of my lectures which I was able to use as the nucleus of the present edition A word about the choice of material The constraints imposed by a partial differential equation on its solutions like those imposed by the environment on a living organism have an infinite variety of consequences local and global identities and inequalities Theories of such equations

usually attempt to analyse the structure of individual solutions and of the whole manifold of solutions by testing the compatibility of the differential equation with various types of additional constraints
