The Grammar Of Science:

The Grammar of Science Karl Pearson, 2007-03-01 The Grammar of Science originally published in 1892 was considered an essential read by budding young scientists like Albert Einstein. Pearson's work contributed to Einstein's greatest discoveries by introducing him to the ideas of relativity of motion, equivalence between matter and energy, and the concept of antimatter. Pearson opens his book with a definition and discussion of science itself, detailing what is required for inquiries to be scientific in nature. He then moves on to discuss space and time, motion, matter, and the future of scientific progress. Professionals and students alike will be fascinated by Pearson's insight into the nature of reality. British professor KARL PEARSON 1857-1936 worked at University College in London. He invented mathematical statistics and formed the Department of Applied Statistics at the University of London. He wrote many books and papers, including a biography of Francis Galton, a proponent of eugenics, and studies on evolution.

The Grammar of Science [by] Karl Pearson Karl Pearson, 1951 **The Grammar of Science (Classic Reprint)** Karl Pearson, 2017-12 Excerpt from The Grammar of Science: If I have not paid greater attention to my numerous critics, it is not that I have failed to study them; it is simply that I have remained obstinately, it may be convinced, that the views expressed are relatively to our present state of knowledge substantially correct. Such changes in form as I have made have been chiefly suggested by further experience in the difficulties which await both pupil and teacher. I can only conclude by expressing a hope that if old friends meet the Grammar in its new form, they will not be displeased by either the superficial changes or the more substantial additions. Excerpt from The Grammar of Science During the eight years which have elapsed since this Grammar was first published the views expounded in it have undoubtedly met with wider acceptance than the author in the least anticipated There are many signs that a sound idealism is surely replacing as a basis for natural philosophy the crude materialism of the older physicists More than one professor of metaphysics has actually discovered that he can best attack modern science by criticising ancient statements as to mechanism from a standpoint remarkably similar to that of the Grammar Step by step men of science are coming to recognise that mechanism is not at the bottom of phenomena but is only the conceptual shorthand by aid of which they can briefly describe and resume phenomena That all science is description and not explanation that the mystery of change in the inorganic world is just as great and just as omnipresent as in the organic world are statements which will appear platitudes to the next generation Formerly men had belief as to the super sensuous and thought they had knowledge of the sensuous About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Martin, Robert Veel, 2005-07-15 *Reading Science* looks at the distinctive language of science and technology and the role it plays in building up scientific understandings of the world. It brings together discourse analysis and critical theory for the first time in a single volume. This edited collection examines science discourse from a number of perspectives drawing on new rhetoric, functional linguistics and critical theory. It explores this language in research and industrial contexts as well as in educational settings and in popular science writing and science fiction. The papers also include consideration of the role of images, tables and figures in science writing and the importance of reading science discourse as multi-modal text. The internationally renowned contributors include M. A. K. Halliday, Charles Bazerman and Jay Lemke.
