In the first topic, the multi objective optimization of interventions on the network is presented to find trade off solutions between costs and efficiency. In the second topic, methodologies are presented to simulate and predict demand and to simulate network behavior in emergency scenarios. In the third topic, a methodology is presented for the multi objective optimization of pump as turbine (PAT).

installation sites in transmission mains In the fourth topic methodologies for pipe burst identification and leakage reduction are presented As for the urban drainage systems UDSs the two explored topics are asset management with a system upgrade to reduce flooding and modeling of flow and water quality with analyses on the transition from surface to pressurized flow impact of water use reduction on the operation of UDSs and sediment transport in pressurized pipes The Special Issue also includes one paper dealing with the hydraulic modeling of an urban river with a complex cross section The Book Buyer's Manual G.P.
