## INTRODUCTION

2

Thank you for purchasing this product. Your new Satellite Radio Antenna is designed to optimally receive both signals from Sirius satellites and terrestrial (ground) transmitters. This antenna has been approved by Sirius Satellite Radio, Inc. to receive signals under a variety of conditions within Sirius North American coverage area. The antenna should be mounted properly according to the instructions to ensure the best possible signal reception.

## INSTALLATION PRECAUTIONS

It is recommended that the antenna be installed at or above room temperature, as lower temperatures may cause the antenna tail to not adhere properly. Maximum adhesion usually occurs within 72 hours at room temperature. Car washes as well as other contact with the antenna and tail should be avoided at this time. Warmer temperatures will allow for easier antenna installation overall, including easier routing of the antenna cable through the rubber molding around windows and other objects on your vehicle.

## VEHICLE ANTENNA MOUNTING

3

Your new Satellite Radio Antenna has a strong magnetic mounting to hold the antenna in place during normal driving conditions (highway/city) and to allow easy removal for transferring to other vehicles or a home unit. It is the discretion of the consumer whether to install the antenna with the tailpiece or without. For optimum performance, it is recommended that the tail be installed with the antenna (see Figure 1). The tail provides the correct distance and cable concealment to install the antenna in a position that gives it the best exposure to the sky. The antenna's tail includes an adhesive strip that also protects the exposed portion of the antenna cable and holds it securely in place.

- Surface Preparation:** Clean the general surface area of the vehicle where you intend to mount the antenna. This area should be cleaned with the alcohol wipe included in this package. Place the antenna at the selected location and the magnet will attach to the surface.
- With-Tail Installation (recommended):** The antenna should be mounted along the centerline of the vehicle's metal roof at minimum 12" x 12" and exactly 6.5" (length for tailpiece) from the vehicle's rear window for most sedan applications. Guide the cable through the bottom of the tailpiece cavity. **DO NOT ADHERE YET.** The cable should be routed along the rear window and underneath the rubber molding, beginning with the tail and tail (see Figure 1). Use a plastic knife or other blunt object to lift the rubber molding and tuck the cable underneath. Route cable down the window to the lowest point and into the trunk area, using existing cable channel or wiring conduit, and through the interior trim to receiver location. Once the cable is routed through to the trunk and you are happy with the location, remove the protective backing from one side of the adhesive strip and press it firmly along the bottom of the tail piece, over the cable guide. Next, remove the other protective backing on the adhesive and firmly place this onto your vehicle's surface. Make sure you are satisfied with the location and press firmly down on the tail for at least 30 seconds. If you intend to transfer the antenna from your car to your home, we do not recommend using the adhesive strip.
