Designing Powerful Training Michael Milano, Diane Ullius, 1998-06-16 An excellent comprehensive and very practical guide for training design Beverly Popek director of human resources professional consulting services MCI Telecommunications The answer is here The heart of this book is the Sequential Iterative Model SIM for training design A fancy term for a simple elegant concept training should be a step by step process with a feedback loop that enables you to continually refine your training based on experience You will not find another book that so thoroughly examines the process of creating training events For anyone who wants to do quality design work this book is highly recommended Mel Silberman author of Active Training and 101 Ways to Make Training Active This book is a tool to help you design training that is Effective Accomplishing specific objectives that aim towards success Efficient Meeting training objectives without wasting time or energy Engaging Involving learners and incorporating their experience into the training You get checklists and evaluations to guide your development process Out of their many years of experience Milano and Ullius have created a practical guidebook that enables you to structure training so it is fluid and adaptable Many guides to instructional design are

stuff academic and difficult to apply to the real world. Not so with *Designing Powerful Training*. This book is easy to approach and visually refreshing with over 70 figures and illustrations. You'll receive an overview of training basics including identifying the central characteristics of adult learners, recognizing the essential skills for instructional design, conducting a simple and quick needs assessment, and much more. Next, the authors introduce you to the revolutionary SIM design. This design guides you through defining training goals and objectives, designing a big picture outline for your training program, refining your outline to create a detailed training process, selecting media for your training events, evaluating the success of your designs. I like this book. The SIM gives me the connection between training design and organizational performance needs I have been looking for in other books.

Joseph A. Greenberg, professor of higher education administration, The George Washington University. An essential piece of the puzzle is the running example that the authors follow throughout the book. This is where the rubber meets the road. You see the SIM in action and you recognize how you'll make it work for you.
