Construction and Use of a Simple, Self-guiding Catheter for Right Heart and Pulmonary Artery Implantation

William P. Fife,SCHOOL OF AEROSPACE MEDICINE BROOKS AFB TEX.,USAF School of Aerospace Medicine,1964 A catheter has been developed which can be easily and rapidly implanted in the right heart or pulmonary artery Fabricated

from Tygon tubing the catheter contains a thin section located 2 cm from the distal end This results in a tip which follows the bloodstream without special manipulation During implantation its position is monitored by the use of a pressure transducer thus eliminating the need for fluoroscopy Since the catheter is self guiding it may be implanted with ease from such distal locations as the femoral vein It can be used to inject substances directly into the heart or pulmonary artery or to withdraw blood samples It also can be used to make pressure recordings of high quality from these areas
