been achieved by these two missions when observing a variety of X ray emitting astronomical objects such as black holes supernova remnants clusters of galaxies and stars However the data are limited to fairly bright X ray sources The recent JAXA s mission Hitomi opened a new window of high resolution X ray spectroscopy thanks to its onboard X ray calorimeter Although this mission was shortly terminated due to a mishap Hitomi left behind a few sets of observations awaiting more data mining The first half of this book introduces the history of high resolution X ray spectroscopy and different generations of X ray spectrometers A tutorial guide on how to reduce analyze and understand the astronomical data from Chandra XMM Newton and Hitomi is also included The second half of the book reviews past results obtained by the high resolution spectrometers on these missions on multiple topics and discusses possible discoveries by upcoming missions in the next decade
