th 2002 DEXA the 13 International Conference on Database and Expert Systems Applications was held on September 2 6
2002 at the Universit Aix Marseille II France The quickly growing field of information systems required the establishment of
more specialized discussion platforms the DaWaK conference EC Web conference eGOV conference and DEXA workshops
and there were held in parallel with DEXA also in Aix en Provence The resulting book was prepared with great effort Starting
with the preparation of submitted papers the papers went through the reviewing process The accepted papers were revised
to final versions by their authors and arranged to the conference program This year 241 papers were submitted and our
thanks go to all who have contributed The program committee and the supporting reviewers produced altogether about 730
referee reports on average three reports per paper and selected 89 papers for presentation The papers presented here
encompass the extensive domain of databases together with the other conferences and workshops of the DEXA event cluster
a vast part of applied computer science was covered In this way DEXA has blazed the trail At this point we would like to
acknowledge to all institutions which actively supported this conference and made it possible These are IUT Universit Aix

McCreedy, Carolyn Weiss, Josh Wisniewski, IBM Redbooks, 2013-06-28 In a world where product lifespans are often measured
in months the IBM Transaction Processing Facility has remained relevant for more than four decades by continuing to
process high volumes of transactions quickly and reliably As the title of this book suggests the z TPF system uses open
standard interfaces to create services Integration of new applications with existing z TPF functions is a key factor in
extending application capabilities The ability for service data objects SDO to access the z TPF Database Facility z TPFDF
provides a framework for data application program development that includes an architecture and application programming
interfaces APIs SDO access to z TPFDF provides remote client applications with access to z TPF traditional data In the
simplest terms service oriented architecture SOA is a means by which like or unlike systems can communicate with one

another despite differences between each system's heritage SOA can neutralize the differences between systems so that they understand one another SOA support for z TPF is a means by which z TPF can interact with other systems that also support SOA This book discusses various aspects of SOA in the z TPF system including explanations and examples to help z TPF users implement SOA IBM WebSphere Application Server was chosen as the partner system as a means of demonstrating how a world class transaction server and a world class application server can work together This book shows you how you can exploit z TPF as a transaction server participating in a SOA structure alongside WebSphere Application Server This IBM Redbooks publication provides an introduction to z TPF and the technologies critical to SOA z TPF is positioned as a provider or consumer in an SOA by supporting SOAP processing communication bindings and Extensible Markup Language XML An example is used to show how z TPF can be used both as a Web service provider and as a consumer A second example shows how to use WebSphere Operational Decision Management to apply business rules A third example shows how business event processing can be incorporated in z TPF applications An example is also used to discuss security aspects including z TPF XML encryption and the z TPF WS Security wrapper The main part of the book concludes with a discussion of z TPF in an open systems environment including examples of lightweight implementations to fit z TPF such as the HTTP server for the z TPF system The appendixes include information and examples using TPF Toolkit sample code and workarounds with yes more examples
