practices during the 13th Five Year Plan period It also forecasts the future development and evolution of the smart court information system The key topics introduced in the book including the overall design of complex information systems integrated interconnection networks based system integration judicial big data quality control and analytics services various types of AI enabled judicial services quality and efficiency oriented operation and maintenance services for large scale information systems etc all came from the basic research of information science and theories as well as the systems engineering practices of the Smart Court SoSe project They not only reflect the latest findings on systems engineering and architecture methods in China and overseas but also reveal many innovative approaches to SoSE methods and paradigms which can be used for the design and continued development of smart courts at a new and higher starting point It is believed that they can also serve as good examples and reference points for the development in IT application and complex information systems engineering in other sectors

Handbook on Agent-Oriented Design Processes Massimo Cossentino,Vincent Hilaire,Ambra Molesini,Valeria Seidita,2014-03-28 To deal with the flexible architectures and evolving functionalities of complex modern systems the agent metaphor and agent based computing are often the most appropriate software design approach As a result a broad range of special purpose design processes has been developed in the last several years to tackle the challenges of these specific application domains In this context in early 2012 the IEEE FIPA Design Process Documentation Template SC0097B was defined which facilitates the representation of design processes and method fragments through the use of standardized templates thus supporting the creation of easily sharable repositories and facilitating the composition of new design processes Following this standardization approach this book gathers the documentations of some of the best known agent oriented design processes After an introductory section describing the goal of the book and the existing IEEE FIPA standard for design process documentation thirteen processes including the widely known Open UP the de facto standard in object oriented software engineering are documented by their original creators or other well known scientists working in the field As a result this is the first work to adopt a standard unified descriptive approach for documenting different processes making it much easier to study the individual processes to rigorously compare them and to apply them in industrial projects While there are a few books on the market describing the individual agent oriented design processes none of them presents all the processes let alone in the same format With this handbook for the first time researchers as well as professional software developers looking for an overview as well as for detailed and standardized descriptions of design processes will find a comprehensive presentation of the most important agent oriented design processes which will be an invaluable resource when developing solutions in various application areas

Document Analysis Systems VI Simone

Marinai, Andreas Dengel, 2004-08-26 This volume contains papers selected for presentation at the 6th IAPR Workshop on Document Analysis Systems DAS 2004 held during September 8-10 2004 at the University of Florence Italy Several papers represent the state of the art in a broad range of traditional topics such as layout analysis applications to graphics recognition and handwritten documents Other contributions address the description of complete working systems which is one of the strengths of this workshop Some papers extend the application domains to other media like the processing of Internet documents The peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the processing of historical documents a taste which frequently requires the analysis of color documents A total of 17 papers are associated with these topics whereas two years ago in DAS 2002 only a couple of papers dealt with these problems In our view there are three main reasons for this new wave in the DAS community From the scientific point of view several research fields reached a thorough knowledge of techniques and problems that can be effectively solved and this expertise can now be applied to new domains Another incentive has been provided by several research projects funded by the EC and the NSF on topics related to digital libraries

Software and Systems Architecture in Action Raghvinder S. Sangwan, 2014-10-27

Modern day projects require software and systems engineers to work together in realizing architectures of large and complex software intensive systems To date the two have used their own tools and methods to deal with similar issues when it comes to the requirements design testing maintenance and evolution of these architectures Software and Systems Architecture in Action explores practices that can be helpful in the development of architectures of large scale systems in which software is a major component Examining the synergies that exist between the disciplines of software and systems engineering it presents concepts techniques and methods for creating and documenting architectures The book describes an approach to architecture design that is driven from systemic quality attributes determined from both the business and technical goals of the system rather than just its functional requirements This architecture centric design approach utilizes analytically derived patterns and tactics for quality attributes that inform the architect's design choices and help shape the architecture of a given system The book includes coverage of techniques used to assess the impact of architecture centric design on the structural complexity of a system After reading the book you will understand how to create architectures of systems and assess their ability to meet the business goals of your organization Ideal for anyone involved with large and complex software intensive systems the book details powerful methods for engaging the software and systems engineers on your team The book is also suitable for use in undergraduate and graduate level courses on software and systems architecture as it exposes

students to the concepts and techniques used to create and manage architectures of software intensive systems
