Pamela Elizabeth Clark, Michael Lee Rilee, 2010-07-01 Remote Sensing from a New Perspective The idea for this book began many years ago when I was asked to teach a course on remote sensing Not long before that time I had been part of the effort to develop the first database for planetary data with a common digital array format and interactive processing capabilities to correlate those data easily the lunar consortium All the available lunar remote sensing data were included orbital and ground based ranging across the entire electromagnetic spectrum I had used this powerful tool extensively and in that spirit I was determined to create a course which covered the entire spectrum and a variety of targets As I looked around for the equivalent of a textbook which I was willing to pull together from several sources I realized that available material was very heavily focused on the visual and near visual spectrum and on the Earth as a target Even The Surveillant Science edited by

Edward Holz and published in 1973 which broke new ground in having diverse articles on most of the spectrum when it was created focused entirely on the Earth My personal favorite the exceedingly well written book on remote sensing by Floyd Sabins first published in 1978 covered the visual infrared and microwave portions of the spectrum beautifully but focused on the Earth as well Unhindered I developed what I called packets of material for each part of the spectrum Risk Modeling, Assessment, and Management Yacov Y. Haimes, 2015-08-03 Presents systems based theory methodology and applications in risk modeling assessment and management This book examines risk analysis focusing on quantifying risk and constructing probabilities for real world decision making including engineering design technology institutions organizations and policy The author presents fundamental concepts hierarchical holographic modeling state space decision analysis multi objective trade off analysis as well as advanced material extreme events and the partitioned multi objective risk method multi objective decision trees multi objective risk impact analysis method guiding principles in risk analysis avoids higher mathematics whenever possible and reinforces the material with examples and case studies The book will be used in systems engineering enterprise risk management engineering management industrial engineering civil engineering and operations research The fourth edition of Risk Modeling Assessment and Management features Expanded chapters on systems based guiding principles for risk modeling planning assessment management and communication modeling interdependent and interconnected complex systems of systems with phantom system models and hierarchical holographic modeling An expanded appendix including a Bayesian analysis for the prediction of chemical carcinogenicity and the Farmer s Dilemma formulated and solved using a deterministic linear model Updated case studies including a new case study on sequential Pareto optimal decisions for emergent complex systems of systems A new companion website with over 200 solved exercises that feature risk analysis theories methodologies and application Risk Modeling Assessment and Management Fourth Edition is written for both undergraduate and graduate students in systems engineering and systems management courses The text also serves as a resource for academic industry and government professionals in the fields of homeland and cyber security healthcare physical infrastructure systems engineering business and more The Future of Industry Andrea Appolloni, Vikas Kumar, Evgeny Kuzmin, Victoria Akberdina, 2024-11-25 This book offers a selection of the best papers presented at the annual International Scientific Conference Digital Transformation in Industry Trends Management Strategies held by the Institute of Economics of the Ural Branch of the Russian Academy of Sciences Ekaterinburg Russia on October 25 27 2023 The main focus of the book is on Industry 5.0 a new paradigm for industrial development related to the humanization of technology and the sustainable development of industrial ecosystems Industry 5.0 is not a technological revolution but a value based initiative that drives technological transformation by establishing the primacy of human value and creating value for humans Key topics include the cross industry potential of Industry 5.0 the humanization of industrial technologies the transition from Industry 4.0 ecosystems to Industry 5.0 the achievement of sustainability in the process of digital transition assessing the

Object Oriented Computer Systems Engineering Derrick Morris,David Evans,Peter Green,Colin Theaker,2012-12-06 This book addresses issues concerning the engineering of system products that make use of computing technology These systems may be products in their own right for example a computer or they may be the computerised control systems inside larger products such as factory automation systems transportation systems and vehicles and personal appliances such as portable telephones In using the term engineering the authors have in mind a development process that operates in an integrated sequence of steps employing defined techniques that have some scientific basis Furthermore we expect the operation of the stages to be subject to controls and standards that result in a product fit for its intended purpose both in the hands of its users and as a business venture Thus the process must take account of a wide range of requirements relating to function cost size reliability and so on It is more difficult to define the meaning of computing technology These days this involves much more than computers and software For example many tasks that might be performed by software running in a general purpose computer can also be performed directly by the basic technology used to construct a computer namely digital hardware However hardware need not always be digital we live in an analogue world hence analogue signals appear on the boundaries of our systems and it can sometimes be advantageous to allow them to penetrate further
