Remillard,Ok-Kyeong Kim,2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U S from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process Although the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used

Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors *Handbook of Research on Field-Based Teacher Education* Hodges, Thomas E., Baum, Angela C., 2018-10-26 Teacher education is an evolving field with multiple pathways towards teacher certification Due to an increasing emphasis on the benefits of field based learning teachers can now take alternative certification pathways to become teachers The Handbook of Research on Field Based Teacher Education is a pivotal reference source that combines field based components with traditional programs creating clinical experiences and on the job learning opportunities to further enrich teacher education While highlighting topics such as certification design preparation programs and residency models this publication explores theories of teaching and learning through collaborative efforts in pre Kindergarten through grade 12 settings This book is ideally designed for teacher education practitioners and researchers invested in the policies and practices of educational design **How Chinese Teach Mathematics and Improve Teaching** Yeping Li, Rongjin Huang, 2013 How Chinese Teach Mathematics and Improve Teaching builds upon existing studies to examine mathematics classroom instruction in China It combines contributions from Chinese scholars with commentary from key Western scholars to offer a truly systematic examination of some important and distinctive features of mathematics classroom instruction Viewing classroom instruction as part of teachers instructional practices this book goes beyond teachers in classroom instructional practice by also examining Chinese teachers approaches and practices in developing and improving teaching Through this unique approach How Chinese Teach Mathematics and Improve Teaching expands and unpacks the otherwise fragmented knowledge about Chinese practices in developing and carrying out mathematics classroom instruction *Mentoring Mathematics Teachers in the Secondary School* Rosa Archer, Siân Morgan, David Swanson, Claire Clemmet, Stef Sullivan, 2023-12-01 This practical workbook assists school based mentors of mathematics teachers to develop their mentoring skills offering mentors the essential guidance needed in order to effectively support trainee or newly qualified secondary mathematics teachers as well as in their overall career development Offering tried and tested strategies based on research and evidence Mentoring Mathematics Teachers in the Secondary School covers the knowledge skills and understanding every mentor needs and offers practical tools such as lesson plans and feedback sheets observation sheets case studies sample dialogues and other learning activities and exercises Together with analytical tools for self evaluation this book is a vital source of support and inspiration for all those involved in developing the next generation of outstanding mathematics teachers whether in teacher training or as newly qualified or early career teachers Key topics explored include Roles and responsibilities of mentors

Approach to Early Numeracy Carol Aubrey, 2000-02-01 Under achievement in maths is a growing concern for many teachers. This book shows how a developmental approach to teaching maths can help to both identify difficulties and raise children's achievement. Practical examples show how these strategies can be applied in classroom situations. Beginning with the early years age focused chapters look at the knowledge children develop outside school how teachers can assess and build on that knowledge children's misunderstandings in maths and how to remedy these. This book also outlines some of the strategies that can be used to identify those in need of special teaching. Practical examples show you how these strategies can be applied in classroom situations. Each chapter is closely linked to the requirements of the National Numeracy Strategy and example lesson plans and activities are included detailing ways of using recommended strategies within the numeracy hour.

Multilingualism in Mathematics Classrooms Richard Barwell, 2009-09-15 Mathematics classrooms are increasingly multilingual whether they are found in linguistically diverse societies urban melting pots or planned bilingual programs. The chapters in this book present and discuss examples of mathematics classroom life from a range of multilingual classroom settings and use these examples to draw out and discuss key issues for the teaching and learning of mathematics and language. These issues relate to pedagogy students learning curriculum assessment policy and aspects of educational theory. The contributions are based on research conducted in mathematics classrooms in Europe South Asia North America and Australia. Recurring issues for the learning of mathematics include the relationship between language and mathematics the relationship between formal and informal mathematical language and the relationship between students home languages and the official language of schooling.

Compendium for Early Career Researchers in Mathematics Education Gabriele Kaiser, Norma Presmeg, 2019-04-26 The purpose of this Open Access compendium written by experienced researchers in mathematics education is to serve as a resource for early career researchers in furthering their knowledge of the state of the field and disseminating their research through publishing. To accomplish this the book is split into four sections: Empirical Methods Important Mathematics Education Themes Academic Writing and Academic Publishing and a section Looking Ahead. The chapters are based on workshops that were presented in the Early Career Researcher Day at the 13th International Congress on Mathematical Education ICME 13. The combination of presentations on methodological approaches and theoretical perspectives shaping the field in mathematics education research as well as the strong emphasis on academic writing and publishing offered strong insight into the theoretical and empirical bases of research in mathematics education for early career researchers in this field. Based on these presentations the book provides a state of the art overview of important theories from mathematics education and the broad variety of empirical approaches currently widely used in mathematics education research. This compendium supports early career researchers in selecting adequate theoretical approaches and adopting the most appropriate methodological approaches for

their own research. Furthermore, it helps early career researchers in mathematics education to avoid common pitfalls and problems while writing up their research and it provides them with an overview of the most important journals for research in mathematics education, helping them to select the right venue for publishing and disseminating their work.
